ECAT PHYSICS CHAPTER-1+2

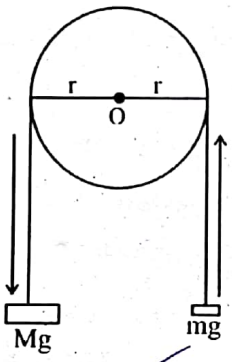

(1) **The minimum number of unequal vectors whose vector sum can be zero are**

(a) 3 (b) 2 (c) 4 (d) 5

(2) If $\vec{L} = \vec{r} \times \vec{P}$ then $\vec{r} \cdot \vec{L}$ is

(a) rL cosθ (b) zero (c) rL (d) rL sinθ

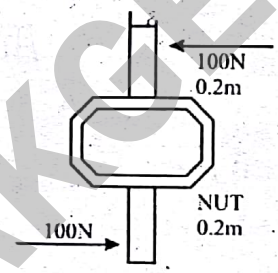

(3) **The resultant torque produced in the system as shown in the fig.**

(a) Mgr + mgr (b) Mgr – mgr

(c) 2gr (M + m) (d) (M – m)2gr

(4) **A cross bar wrench is used to tighten a nut as shown in the figure. The torque exerted by the wrench is**

(a) 80 Nm (b) 40 Nm

(c) 20 Nm (d) 10 Nm

(5) **The reverse process for vectors addition is called**

(a) multiplication of vectors (b) resolution of vectors

(c) subtraction of vectors (d) dot product of vectors

(6) **Angular acceleration is produced by**

(a) momentum (b) angular momentum (c) torque (d) force

(7) **For rotational equilibrium**

(a) $\sum \vec{F} = 0$ (b) $\sum \vec{F} = 0, \sum \vec{\tau} = 0$ (c) $\sum \vec{\tau} = 0$ (d) $\sum \vec{F}$ and $\sum \vec{\tau} \neq 0$

(8) **The scalar product of two vectors 5N and 2N is 5N Angle between them is**

(a) 60° (b) 90° (c) 30° (d) 45°

(9) **The angle between $\hat{i} - \hat{j}$ and $\hat{i} + \hat{j}$ is**

(a) 30° (b) 90° (c) 60° (d) 0°

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(10) Three vectors $\vec{A}, \vec{B}$ and $\vec{C}$ satisfy the relation $\vec{A}.\vec{B}=0$ and $\vec{A}.\vec{C}=0$ then $\vec{A}$ is parallel to

(a) $\vec{B}\times\vec{C}$ (b) $\vec{C}$ (c) $\vec{B}$ (d) $\vec{B}.\vec{C}$

(11) A force of 20 N is making angle 30° with y –axis its x- component is

(a) 20 N (b) 5 N (c) 10 N (d) zero

(12) Two vectors $\vec{A}$ and $\vec{B}$ are such that $\vec{C}=\vec{A}+\vec{B}$ and $C^2=A^2+B^2$ Angle between $\vec{A}$ and $\vec{B}$ is

(a) 0° (b) 60° (c) 90° (d) 45°

(13) One of the rectangular components of a force is 10 N and makes 60° with force. The force is

(a) 7 N (b) 20 N (c) 14 N (d) 17 N

(14) The vector $\vec{A}=\hat{i}+\hat{j}$ where $\hat{i}$ and $\hat{j}$ are unit vectors along x–axis and y–axis respectively. The angle made by vector $\vec{A}$ with x-axis is

(a) 30° (b) 45° (c) 60° (d) 90°

(15) Two vectors are at right angle then

(a) $\vec{A}+\vec{B}=0$ (b) $\vec{A}.\vec{B}=0$ (c) $\vec{A}-\vec{B}=0$ (d) $\vec{A}\times\vec{B}=0$

(16) What is the angle made by $3\hat{i}+4\hat{j}$ with x-axis

(a) 0° (b) 180° (c) $\tan^{-1}\left(\frac{3}{4}\right)$ (d) $\tan^{-1}\left(\frac{4}{3}\right)$

(17) If $\left|\vec{A}\times\vec{B}\right| = \sqrt{3}\,\vec{A}.\vec{B}$ then angle b/w $\vec{A}$ and $\vec{B}$ is

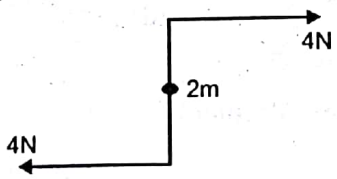

$AB\sin\theta = \sqrt{3}\,AB\cos\theta$
$\sin\theta = \sqrt{3}\cos\theta$
$\tan\theta = \sqrt{3}$
$\theta = \pi/3$

(a) 0° (b) 45° (c) 30° (d) 60°

(18) The angle between $\vec{A}+\vec{B}$ and $\vec{A}\times\vec{B}$ is

(a) 0 (b) $\frac{\pi}{4}$ (c) $\frac{\pi}{2}$ (d) π

(19) What is the net torque acting on the rod

(a) 6 Nm (b) 12 Nm (c) 8 Nm (d) 18 Nm

(20) $\hat{i}.(\hat{k}\times\hat{j})$ is

(a) 0 (b) -1 (c) 1 (d) $\hat{j}$

(21) The length, breadth and thickness of sheet are 3.233m, 2.105m and 1.05 m respectively. Volume of sheet upto the appropriate significant digits is:

(a) 7.25 m^3 (b) 7.5 m^3 (c) 7.15 m^3 (d) 7.1 m^3

(22) Significant figures in 0.2001 are

(a) 2 (b) 1 (c) 4 (d) 3

(23) The least count is called

(a) percentage uncertaintity (b) fractional uncertainty
(c) absolute uncertainty (d) all of these

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(24) **Which of the following is the most precise instrument for measuring length?**

(a) meter rod of least count 0.1 cm

(b) vernier caliper of least count 0.01 cm

(c) screw gauge of least count 0.001 cm

(d) Michelson Interferometer of Least count 10^{-4} mm

L.C ← absolute uncertainty is precision
lesser greater the L.C or absolute uncertainty more precise the measurement will be.

(25) **S.I unit of pressure is**

(a) mm of Hg (b) atmosphere (c) torr (d) pascal

(26) **One year is equal to**

(a) 3.2×10^7s (b) 8.6×10^4 s (c) 4×10^{17} s (d) 3.2×10^8 s

(27) $\frac{\text{Energy}}{\text{Mass} \times \text{length}}$ **is equal to**

(a) acceleration (b) power (c) force (d) work

(28) **Which of following pairs has same dimensions**

(a) pressure, stress (b) momentum, impulse

(c) energy, torque (d) all of these

(29) **If error in the measurement of mass is 1 % and radius is 2%. Then maximum error in moment of inertia is**

(a) 3% (b) 5% (c) 4% (d) 7%

(30) **One nanometer is equal to**

(a) 10^9 mm (b) 10^{-6} cm (c) 10^{-7} cm (d) 10^{-9} cm

(31) **When 400.1 is added to 20.54 we get**

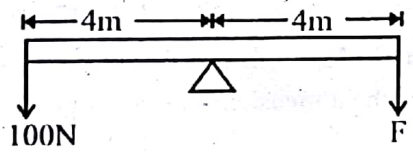

(a) 420 (b) 420.1 (c) 420.65 (d) 420.6

(32) **$[M^{-1} L^3 T^{-2}]$ is dimensional formula of**

(a) Gravitational constant (b) surface tension

(c) elasticity (d) acceleration due to gravity

(33)

The meter rod is pivoted as shown. Find the force F, such that the rod is in equilibrium

A) 100N B) 50N C) 200N D) 125 N

(34) **The ratio of micro to mega is**

(a) 1 (b) 10^{-12} (c) 10^{-6} (d) 10^{12}

(35) **SI unit of temperature is**

(a) K (b) F^o (c) C^o (d) all of these

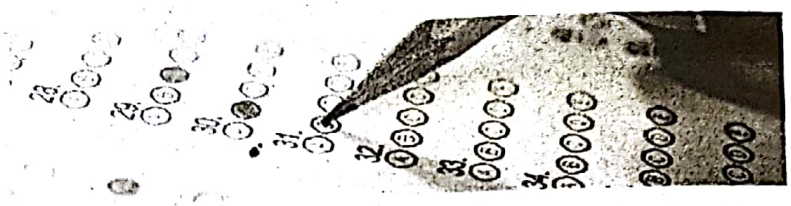

(36) **Which of the following cannot be expressed as Nm^{-2}**

(a) pressure (b) stress

(c) modulus of elasticity (d) surface tension

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(37) **A student when discussing the properties of medium (except vacuum) write velocity of light in vacuum = velocity of light in medium. This formula is**

(a) dimensionally correct (b) dimensionally incorrect
(c) numerically incorrect (d) both A and C

(38) **The number of significant figures in 4.00×10^4 are**

(a) 1 (b) 3 (c) 2 (d) 4

(39) **Under same environment the measurement of physical quantity gives different values the error is called**

(a) systematic error (b) instrument error (c) random error (d) all of these

(40) **A particle is moving eastward with the velocity of 5 ms^{-1}. In 10 seconds the velocity changes to 5 ms^{-1} northward. The average acceleration in this time is**

(a) $\frac{1}{\sqrt{2}}$ ms^{-2} towards north west (b) $\frac{1}{2}$ ms^{-2} towards north west

(c) $\frac{1}{\sqrt{2}}$ ms^{-2} towards north east (d) $\frac{1}{2}$ ms^{-2} towards north east

(41) **Planck's constant has same dimensions as that of**

(a) energy (b) angular momentum (c) momentum (d) force

(42) **The dimensions shear modulus of rigidity are**

(a) ML^1T^{-2} (b) MLT^{-1} (c) ML^2T^2 (d) $ML^{-1}T^{-2}$

(43) **ML^2T^{-3} is dimensional formula of**

(a) power (b) torque (c) energy (d) momentum

(44) **Which of the following is dimensionless**

(a) momentum /speed (b) force/speed (c) Torque/energy (d) acceleration/mass

(45) **1 light year is equal to**

(a) 9.5×10^{15} m (b) 9.5×10^{15} km (c) 9.5×10^{-15} m (d) 9.5×10^{16} km

(46) **Which of the following pairs of physical quantities have the same dimensions?**

(a) work and power (b) work and torque
(c) force and power (d) momentum and power

(47) **If L and C denote inductance and capacitance, the dimensions of LC are**

(a) $M^0 L^0 T^0$ (b) $ML T^{-2}$
(c) $M^0 L^2 T^{-2}$ (d) $M^0 L^0 T^2$

(48) **L, C and R represent the physical quantities inductance, capacitance and resistance, respectively. The combinations which have the dimensions of frequency are**

(a) $\frac{1}{RC}$ (b) $\frac{R}{L}$

(c) $\frac{1}{\sqrt{LC}}$ (d) All of these

(49) **Which of the following quantities has not been expressed in proper units?**

(a) Young's Modulus = Nm^{-2} (b) Surface Tension = N/m
(c) Pressure = Nm^{-2} (d) Energy = kg ms^{-1}

(50) **Force of 5N acts on a body of 5kg for 5 sec then the rate of change in momentum is**

(a) 25N (b) 50N
(c) 5N (d) 125N

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

ECAT PHYSICS CHAPTER-3+4

(1) **The displacement time graph of a particle moving with uniform velocity is**

(a) parabola (b) straight line (c) circle (d) hyperbda

(2) **The ratio of distance to displacement along a semi circle of radius r is**

(a) 2π (b) π (c) $\pi/2$ (d) $\pi/4$

(3) **Which of following changes when particle is moving with uniform velocity?**

(a) speed (b) acceleration (c) velocity (d) position vector

(4) **The displacement time graph for two bodies A and B are straight lines inclined at 60° and 30° to time axis. Find ratio of their speed is**

(a) 3 : 1 (b) $\sqrt{3}$:1 (c) 1 : 3 (d) 1: $\sqrt{3}$

(5) **A ball is projected at 45° its horizontal range is 10m. Velocity of projection is**

(a) 5 ms^{-1} (b) 15 ms^{-1} (c) 10 ms^{-1} (d) 20 ms^{-1}

(6) **The numerical value of the ratio of average velocity to average speed is**

(a) always less than one (b) always equal to one

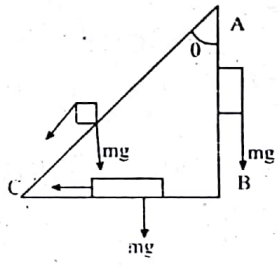

(c) always more than one (d) equal to or less than one

(7) **Rocket works on the principle of conservation of**

(a) mass (b) energy

(c) momentum (d) angular momentum

(8) **A body is displaced in a gravitational field as shown in the figure the work done from A to C is**

A) Greater than the work done from A to C via B

B) Equal to the work done from A to C via B

C) Less than the work done from A to C via B

D) Double of the work done from A to C via B

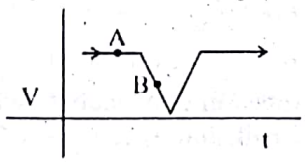

(9) **If momentum is increased by two times K.E increases by**

(a) two times (b) 3 times (c) four times (d) remains

(10) **An athlete completes one round of a circular track of radius R in 40sec what will be displacement at the end of 1minute.**

(a) O (b) 2R (c) R (d) $3\pi R$

(11) **The velocity time graph of a body is shown. It implies that at B**

(a) $\vec{F}$ is zero (b) $\vec{F}$ opposes motion

(c) $\vec{F}$ is towards motion (d) none

(12) **How far in meter will a freely falling body fall in 5 sec**

(a) 125 (b) 50 (c) 250 (d) 225

(13) **The velocity time graphs are inclined at 30° and 45° with time axis. The ratio of their acceleration**

(a) $\sqrt{3}$:2 (b) $\sqrt{3}$: 1 (c) 1 : $\sqrt{3}$ (d) none

(14) **If constant force is applied to a body it moves with uniform**

(a) velocity (b) momentum (c) acceleration (d) K.E

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(15) At maximum height in projectile motion $\vec{v}$ and $\vec{a}$ are
(a) parallel (b) perpendicular (c) anti parallel (d) at maximum high v =0

(16) The ratio of range and height at 45° is
(a) 1 : 4 (b) 1 : 2 (c) 4 : 1 (d) 2 : 1

(17) In projectile motion if air resistance is ignored the horizontal motion is with
(a) constant velocity (b) variable velocity
(c) constant acceleration (d) constant retardation

(18) The speed of projectile at maximum height is half of its initial speed v its angle of projection is
(a) 30° (b) 60° (c) 45° (d) 90°

(19) The angle between velocity and acceleration during the retarded motion is
(a) 180° (b) 90° (c) 45° (d) 0°

(20) Two balls collide inelastically what is conserve
(a) K.E (b) temperature (c) velocity (d) momentum

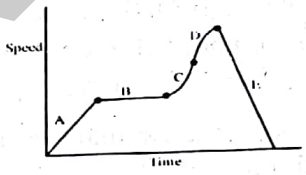

(21) If R is the maximum horizontal range of projectile, then the greatest height attained by it is
(a) R (b) 2R (c) $\frac{R}{2}$ (d) $\frac{R}{4}$

(22) A body of momentum mv collides a wall elastically its change in momentum is
(a) -2mV (b) –mv (c) mV (d) 0

(23) A force of 10 N acts on a body for 5 sec. What will be the change in momentum
(a) 10 N.s (b) 50 N.s (c) 5 N.s (d) 100 N.s

(24) If H = R then angle of projection is
(a) 45° (b) 76° (c) 60° (d) 90°

(25) The graph shows how the speed of an object changes with time.

Which section of the graph shows the object moving with an increasing acceleration.
(a) A (b) B (c) C (d) D

(26) The ballistic missiles are used for _____ range
(a) long (b) medium (c) short (d) may a or b

(27) A billiard ball moving with a speed of 5 m/s collide with an identical ball, originally at rest. If first ball stops dead after the collision, then second ball will move forward with speed of
(a) 10 m/s (b) 5 m/s (c) 2.5 m/s (d) 9 m/s

(28) A force of $3\hat{i}+2\hat{j}+4\hat{k}$ N gives displacement of 10 $\hat{j}$ m. The work done is
(a) 20 J (b) 26 J (c) 32J (d) zero

(29) A body travels displacement of 10 m by force of 5N If work done is 25 J then angle between $\vec{F}$ and $\vec{d}$ is
(a) 0° (b) 45° (c) 30° (d) 60°

(30) When person lifts a body from the ground, work done by the lifting force is
(a) positive (b) negative (c) zero (d) one

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(31) **A bomb at rest explodes into two pieces of same mass two pieces will**

(a) at rest

(b) move with same speed in opposite direction

(c) move with different velocity

(d) move with same velocity

(32) **When a conservative force does positive work on a body the P.E of body**

(a) increases (b) renames same

(c) decreases (d) may increase or decrease

(33) **The escape velocity for a body projected from earth is 11 kms^{-1} If projected at 45^0 it will be**

(a) 11 kms^{-1} (b) 44 kms^{-1} (c) 22 kms^{-1} (d) 11 ms^{-1}

(34) **Kinetic energy of a body moving with speed of 10 ms^{-1} is 30J. If its speed becomes 30 m/s its K.E will be**

(a) 10 J (b) 90 J (c) 180 J (d) 270 J

(35) **A particle falls towards earth from infinity. Its velocity on reaching the earth would be**

(a) $\sqrt{gR}$ (b) $\sqrt{2gR}$ (c) gR (d) 2gR

(36) **Tides are produced in a sea due to gravitational pull of**

(a) moon (b) earth (c) sun (d) both A and C

(37) **The time taken by an engine of power 10 kW to lift a mass of 200 kg to the height of 40 m is**

(a) 2 s (b) 4 s (c) 8 s (d) 16 s

(38) **The consumption of energy by 60 watt bulb in 2 sec is**

(a) 120 J (b) 30J (c) 60 J (d) 10 J

(39) **Escape velocity of body depends upon**

(a) mass of body (b) mass of planet (c) density of planet (d) both b and c

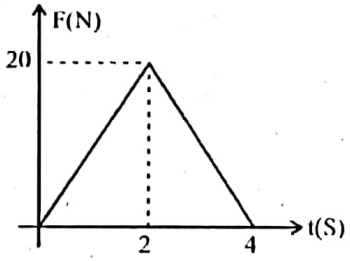

(40) **A car accelerates up a hill what happens to its K.E and to its P.E respectively**

	Kinetic Energy	Potential Energy
A	Increases	Decreases
B	Decreases	Increases
C	Increases	Increases
D	Unchanged	Increases

(41) **Bio fuel ethanol is replacement of**

(a) gasoline (b) coal (c) kerosene (d) all

(42) **The variation of force acting on a body with time is shown**

What is the momentum of body after 4s

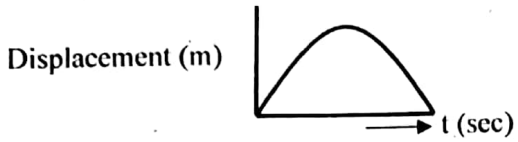

A) 10Nss B) 20N C) 40Ns D) 80Ns

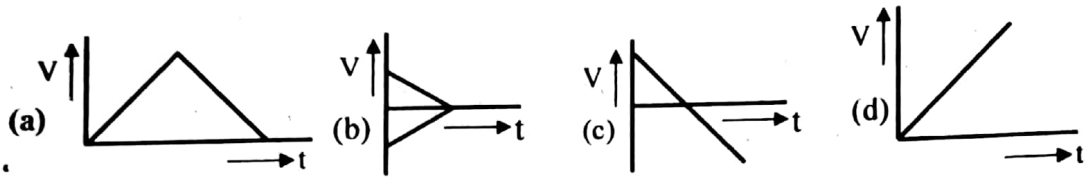

(43) **Solar energy at normal incidence outside earth atmosphere**

(a) 1.2 Kwm^{-2} (b) 1.6 Kwm^{-2} (c) 1.4 Kwm^{-2} (d) 1.0 Kwm^{-2}

For more Entry Test books and MCQS visit PAKGET.PK

(44) **Displacement time graph of a ball thrown vertically upward is shown in figure**

(45) **According to the first law of Newton, mass of an object is qualitative measure of its**

(a) inertia (b) momentum (c) moment of inertia (d) force

(46) **At which angle work done equal to half of its maximum value**

(a) 30° (b) 60° (c) 45° (d) 90°

(47) **Which one of the following is non–conservative**

(a) friction (b) tension in string (c) air resistance (d) all of these

(48) **The food which we eat in 3 days produce energy equal to energy from _____ litre of petrol**

(a) 1 (b) 3 (c) 1/3 (d) 9

(49) **A force of 5N acts on a body of 5kg for 5 sec. The rate of change of momentum is**

(a) 25N (b) 5 N (c) 50 N (d) 125 N

(50) **The range of projectile at 30^0 is R, at the angle of 60^0 the range will be**

(a) R (b) $\frac{R}{2}$ (c) 2R (d) $\frac{R}{4}$

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

ECAT PHYSICS CHAPTER-5+6

(1) The moment of inertia is the ratio of

(a) mass and velocity (b) momentum and ω

(c) momentum and acceleration (d) angular momentum and ω

(2)

If the ratio between A_1 and A_2 of the pipe is 2, the value of exist velocity V_2 will be

A) $2V_2$ C) $2V_1$

B) $\frac{V_1}{2}$ D) None of these

(3) The ratio of total energy to rotational energy associated with hoop is

(a) $\frac{2}{1}$ (b) $\frac{1}{4}$ (c) $\frac{1}{3}$ (d) $\frac{2}{3}$

(4) What will be duration of day and night if earth shrinks to half the present radius

(a) 24 hrs (b) 6 hrs (c) 12 hrs (d) 3 hrs

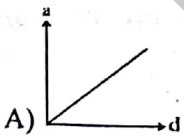

(5) The moment of momentum is called

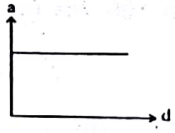

(a) couple (b) impulse (c) torque (d) angular momentum

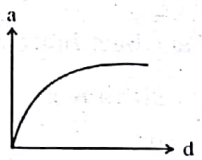

(6) A body of mass 2kg is hung on a spring balance mounted vertically in a lift moving upward with an acceleration $2ms^{-2}$. The reading on the spring balance will be

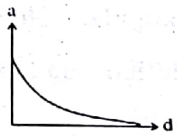

A) 20 N B) 22 $kgms^{-2}$ C) 24 $kgms^{-2}$ D) 28 N

(7) A ball bearing is held just below the water surface in a tall vessel and then released. Its acceleration – displacement graph will be

A) 

B) 

C) 

D) 

(8) Two circular rings have masses in the ratio 1 : 2 and diameters 2 : 1 the ratio of their moment of inertia is

(a) 1 : 4 (b) 4 : 1 (c) 2 : 1 (d) $\sqrt{2}$: 1

(9) The angular speed of hour's hand of mechanical watch is -------- radian per hours

(a) $\pi/6$ (b) $\pi/4$ (c) $\pi/12$ (d) $\pi/8$

(10) INTELSAT has capacity of

(a) 3 channels (b) 30,00 two way telephone

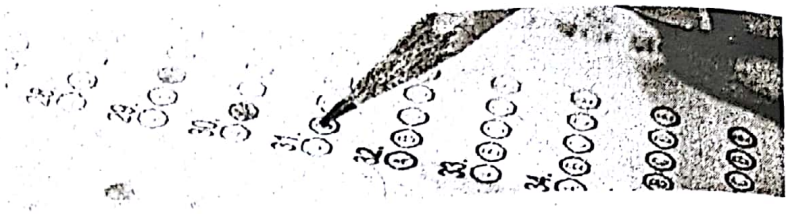

(c) 50,00 two way telephone (d) both a & b

(11) The ratio of moment of inertia of disc and hoop is

(a) 1 : 2 (b) 1 : 4 (c) 2 : 1 (d) 8 : 1

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(12) **A satellite appears to be at rest when seen from the equator. Its height from the earth surface is nearly**

(a) 35600 km (b) 356000 km

(c) such a satellite can not exist (d) 6400 km

(13) **$r\omega^2$ has unit of**

(a) N (b) ms^{-1} (c) ms^{-2} (d) s^{-1}

(14) **The angle subtended by an arc equal to radius is**

(a) 1 rad (b) One degree (c) 1 Revolution (d) All

(15) **A wheel rotates about an axis passing through the centre and perpendicular to the plane with slowly increasing angular speed. Thus it has**

(a) radial velocity and radial acceleration

(b) tangential velocity and radial acceleration

(c) tangential velocity and tangential acceleration

(d) tangential velocity but acceleration having both components

(16) **Angle between linear and angular velocity is**

(a) 90° (b) 180° (c) 0° (d) 45°

(17) **$2\pi r$ subtends an angle of**

(a) 1 radian (b) 2 radian (c) 4 radian (d) 2π *rad*

(18) **A disc and ring have same mass and same radius. If we denote the moment of inertia of disk by I_d and that of ring by I_r, then**

(a) $I_r > I_d$ (b) $I_r < I_d$ (c) $I_r - I_d$ (d) $I_r = I_d$

(19) **Work done by central force is**

(a) Maximum (b) Minimum (c) Zero (d) Negative

(20) **The angular velocity of a wheel increases from 100 rps to 300 rps in 10s. The number of revolutions made during that time is**

(a) 600 (b) 1500 (c) 1000 (d) 2000

(21) **If the weight of a man is 100N and he is sitting in an elevator. Which is moving down with an acceleration of 9.8 m/s^2. then the apparent weight of the mass will be**

(a) 100 N (b) 1960 N (c) 200 N (d) Zero

(22) **Angular momentum under central force is for rotating body**

(a) Zero (b) Minimum (c) Maximum (d) Constant

(23) **ML^2 is dimensional formula of**

(a) Momentum (b) Force

(c) Inertia (d) Momentum of inertia

(24) **When a body moves along a circle path, it velocity**

(a) remains constant (b) becomes zero

(c) changes continuously (d) always increases

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(25) Height of closest orbit of earth is

(a) 400m (b) 40 km (c) 400 km (d) 36000 km

(26) In the constricted part of a pipe, fluid

(a) Velocity increases pressure decreases (b) Velocity and pressure increases

(c)Velocity and pressure decreases (d) Velocity decreases pressure increases

(27) Bernoulli equation is applicable in case of

(a) Turbulent flow (b) Streamline flow of incompressible fluid

(c) Streamline and compressible fluid (d) None

(28) The speed of efflux can be written as

(a) $\sqrt{2gh}$ (b) $\sqrt{gh}$ (c) $\sqrt{2\rho gh}$ (d) $\sqrt{\rho gh}$

(29) The acceleration of a particle moving with terminal velocity through a fluid is

(a) Positive (b) Negative (c) Zero (d) Cannot produced

(30) Dragging force depends upon

(a) Velocity of spherical body (b) Radius

(c) Co-efficient of viscosity (d) All

(31) As the speed of falling drop increases its dragging force

(a) Decreases (b) Increases (c) Remains same (d) Cannot predicted

(32) Viscosity of gas with increase in temperature

(a) Increases (b) Decreases (c) Remains same (d) Zero

(33) An artificial satellite orbiting around the earth does not fall down because the attraction of the earth

(a) vanishes at such distances

(b) is balanced by the attraction of the moon

(c) is balanced by the centrifugal force

(d) provides the necessary acceleration for is motion in a curved path

(34) The diastolic pressure is about

(a) 120 torr (b) 80 torr (c) 60 torr (d) 90 torr

(35) The rate of out flow of liquid through an orifice does not depend upon

(a) radius of the orifice (b) height of liquid column

(c) acceleration due to gravity (d) density of liquid

(36) If radius of droplet is doubled terminal velocity will

(a) Increase twice (b) Increase thrice (c) Increase 4 times (d) Same

(37) The SI unit of coefficient of viscosity is

(a) $kgm^{-1}\ s$ (b) $kg\ m^{-1}s^{-1}$ (c) $kgms^{-1}$ (d) $kg^2\ m^{-2}s^{-2}$

(38) A liquid moves through horizontal pipe. The pressure is

(a) lower where diameter is large

(b) higher where diameter is large

(c) same throughout pipe but less than atmospheric pressure

(d) same throughout pipe but more than atmospheric pressure

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(39) Bernoulli's equation is based upon law a conservation of

(a) Mass (b) Energy (c) momentum (d) All

(40) A liquid is flowing in a tube under stream line flow if the radius of tube is doubled, the rate of flow becomes

(a) 4 times (b) 16 times (c) $\frac{1}{4}$ times (d) remain same

(41) Normally the blood pressure of the person

(a) Decreases with age (b) Increase with age

(c) Remains same (d) Cannot predicted

(42) The maximum dragging force on a sphere of weight 9.8 N is

(a) 9.8 N (b) 4.9 N (c) 19. 6 N (d) 20 N

(43) The rotational K.E of solid sphere is

(a) $\frac{1}{5}mv^2$ (b) $\frac{1}{2}mv^2$ (c) mv^2 (d) $\frac{2}{5}mv^2$

(44) Law of conservation of angular momentum is applicable on

(a) ice skating (b) gymnastic (c) diving (d) all of these

(45) Above critical velocity the fluid flow is

(a) laminar (b) regular (c) streamline (d) turbulent

(46) For a small θ, angular displacement is quantity

(a) scalar (b) vector

(c) neither scalar nor vector (d) none

(47) For positive angular displacement the rotation would be

(a) clockwise (b) anti-clockwise (c) parallel (d) perpendicular

(48) The instrument use to measure the blood pressure is

(a) barometer (b) sphygmomanometer

(c) venture meter (d) stethoscope

(49) The high concentration of red blood cells increases its viscosity from

(a) equal to that of water (b) 3 to 5 times of water

(c) 2 to 3 times of water (d) 2 to 5 times of water

(50) A body of mass m is attached to a spring balance which is attached to the ceiling of an elevator, if elevator moves up with certain acceleration, apparent weight of the body will be:

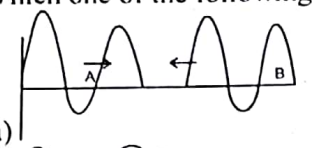

(a) m (g + a) (b) $g\left(m+\frac{ma}{g}\right)$ (c) $a\left(m+\frac{mg}{a}\right)$ (d) All of these

ECAT PHYSICS CHAPTER-7+8

(1) Which one of the following graphs shows constructive interference

(a) 

(b) 

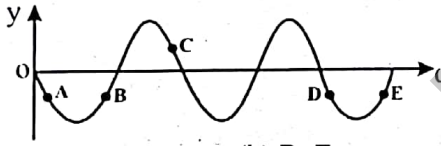

(c) 

(d) 

(2) **The number of vibrations per second is called**

(a) Time period (b) Frequency (c) Velocity (d) Distance

(3) **The diagram shows the profile of a wave. Which of the following pairs of points are in phase?**

(a) A, B (b) B, E
(c) B, D (d) B, C

(4) **A simple pendulum is made of body which is hollow sphere containing mercury suspended by means of a wire. If a little mercury is drained off, the period of pendulum will**

(a) remain same (b) increases (c) decreases (d) become erratic

(5) **A physical system under going forced vibrations is called**

(a) Driven harmonic oscillator (b) Forced harmonic oscillator
(c) Simple harmonic oscillators (d) both a & b

(6) **Total energy of S.H.M at mean position is**

(a) K.E (b) P.E (c) zero (d) both K.E and P.E

(7) **Frequency for second's pendulum is**

(a) 2 sec (b) 2min (c) 0.5 Hz (d) 2.5sce

(8) **Wave form of S.H.M is**

(a) Sine wave (b) Square wave (c) Saw tooth wave (d) rectangular wave

(9) **Tuning of a radio set is an example of _____ resonance**

(a) electrical (b) mechanical (c) free (d) all of these

(10) **When simple pendulum swings, which of the following quantity does not become zero throughout the oscillation:**

(a) mass of pendulum (b) momentum of pendulum
(c) acceleration of pendulum (d) velocity of pendulum

(11) **Time period of simple pendulum is T. If its length is increased by 4 times its period will be**

(a) T (b) 2T (c) $\frac{T}{2}$ (d) 4T

(12) **A heavily damped system has fairly flat resonance curve in _____ graph**

(a) Velocity time (b) Distance time
(c) Acceleration (d) Amplitude frequency

(13) **The displacement of S.H.M of amplitude x_o in one period is**

(a) x_o (b) $2x_o$ (c) $4x_o$ (d) Zero

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(14) **At mean position of harmonic oscillator**

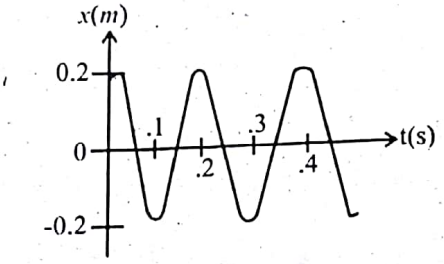

(a) minimum K.E and minimum P.E (b) maximum K.E and minimum P.E

(c) minimum K.E and maximum P.E (d) maximum K.E and maximum P.E

(15) **A S.H.M has amplitude A and time period T its maximum speed is**

(a) $\frac{4A}{T}$ (b) $\frac{2\pi A}{T}$ (c) $\frac{2A}{T}$ (d) $\frac{4\pi A}{T}$

(16) **From the displacement time graph of an oscillating particle. Find the maximum velocity of the particle.**

(a) 2 ms^{-1} (b) $\pi/5$ ms^{-1} (c) π ms^{-1} (d) $\frac{\pi}{2}$ ms^{-1}

(17) **A loaded spring vibrates with period T, it then cut into 4 equal parts and the same load is suspended from one part. New period is**

(a) $\frac{T}{4}$ (b) $\frac{T}{2}$ (c) 2T (d) 4T

(18) **Period of oscillation of mass m suspended from spring is 1s then period of mass 4m will be**

(a) $\frac{1}{4}s$ (b) $\frac{1}{2}s$ (c) 2s (d) 4s

(19) **If amplitude of S.H.M is doubled then speed of v at mean position will be**

(a) 2V (b) 3V (c) 4V (d) V

(20) **The graph of acceleration as a function of displacement in S.H.M is**

(a) Straight line (b) Parabola (c) Circle (d) Ellipse

(21) **A source of sound and a listener are both moving in the same direction, the source following the listener. If the respective velocities of sound, source and listener are v, v_s and v_l then the ratio of the actual frequency of the source and the apparent frequency as received by the listener is**

(a) $\frac{v-v_l}{v-v_s}$ (b) $\frac{v+v_l}{v+v_s}$ (c) $\frac{v-v_s}{v-v_l}$ (d) $\frac{v+v_s}{v+v_l}$

(22) **Due to overlapping of two identical waves the speed of resultant wave**

(a) Decreases (b) Increases

(c) Remains same (d) may increase or decrease

(23) **Find the amplitude of and object oscillating at the end of a spring, if the equation for its position at any instant 'T' is given by** $x = 0.258\ \text{Cos}\left(\frac{1}{8}\right)t$

(a) 0.258m (b) $\frac{\pi}{8}$m

(c) 25 m (d) None of these

(24) **The acceleration of the free fall on the moon is one sixth of that on the earth, what would be the period on the moon of a simple pendulum which has a period of one second on the earth?**

(a) $\sqrt{6}$ sec (b) 6s (c) $\frac{1}{\sqrt{6}}$s (d) $\frac{6}{\sqrt{6}}$s

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(25) **Due to moisture in air speed of sound**
(a) Increases (b) Decreases
(c) Remains same (d) May increase or decrease

(26) **The velocity of sound in vacuum is**
(a) 3×10^8 ms^{-1} (b) 350 ms^{-1} (c) 1500 ms^{-1} (d) 0 ms^{-1}

(27) **When the propagation of a longitudinal wave through a material medium takes place, the quantities transmitted in the direction of propagation are**
(a) energy, momentum and mass (b) energy
(c) energy and mass (d) energy and momentum

(28) **The wavelength of fundamental mode of vibration of closed organ pipe is**
(a) 2L (b) 4L (c) L (d) $\frac{L}{2}$

(29) **Increase in velocity of sound in air for 1°C rise in temperature is**
(a) 61ms^{-1} (b) 0.61ms^{-1} (c) 61cms^{-1} (d) Both b and c

(30) **Under identical condition of pressure and density, the speed of sound is highest in**
(a) mono atomic gas (b) diatomic gas (c) tri atomic gas (d) poly atomic gas

(31) **The propagation of sound through air is an**
(a) isothermal process (b) adiabatic process (c) isobaric process (d) isochoric process

(32) **The speed of sound is greater in solid than in gas due to their high**
(a) elasticity (b) Density (c) Temperature (d) All

(33) **One of the basic property of all oscillatory systems is**
(a) the time period and frequency (b) the direction of velocity
(c) the exchange of energy during motion (d) none of these

(34) **A string of length ℓ can maintain stationary waves of λn given by**
(a) $\frac{2n}{\ell}$ (b) $\frac{2\ell}{n}$ (c) $\frac{\ell}{n}$ (d) $\frac{n}{2}$

(35) **The speed of sound is independent of change in**
(a) Pressure (b) Temperature (c) Density (d) Humidity

(36) **Which of the following can propagate both transverse and longitudinal waves**
(a) Gas (b) Liquid (c) Solid (d) All

(37) **A simple pendulum is oscillating in a lift. If the lift starts moving upwards with a uniform acceleration, the period will:**
(a) remain unaffected
(b) be shorter
(c) be longer
(d) may be shorter or longer, depending on the magnitude of acceleration

(38) **The speed of sound of frequency f is v. The speed of sound having frequency 2f is**
(a) v (b) 2v (c) $\frac{v}{2}$ (d) $\sqrt{2}v$

(39) **The speed of sound in air is 350 ms^{-1} the fundamental note emitted by tube of 0.5m closed at one end**
(a) 50Hz (b) 350 Hz (c) 175Hz (d) 500 Hz

(40) **Overtones produced by a closed-end organ pipe are**
(a) f, 3f, 5f, ... (b) 2f, 3f, 4f, ... (c) 3f, 5f, 7f, ... (d) f, 2f, 3f, ...

(41) **If the number of loops of a stationary wave are increasing then**
(a) λ increases (b) λ decreases
(c) λ remains same (d) λ may increase or decrease

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(42) **A silence zone occurs due to**

(a) Resonance (b) Polarization

(c) Destructive interference (d) Constructive interference

(43) **The first resonance length in a closed pipe is 20 cm then second resonance occurs at**

(a) 60 cm (b) 90 cm (c) 120 cm (d) 80 cm

(44) **When waves travel from air to glass which of these remains same**

(a) Velocity (b) Wavelength (c) Frequency (d) all of these

(45) **A train moves with a speed of 90 kmh^{-1}, produces sound of 1000 Hz, frequency heard by driver will be**

(a) same (b) less (c) greater (d) either b or c

(46) **How does speed of sound in air depends on atmospheric pressure P**

(a) $v \propto P^{-1}$ (b) $v \propto P^{\frac{1}{2}}$ (c) $v \propto P^{-\frac{1}{2}}$ (d) $v \propto P^{o}$

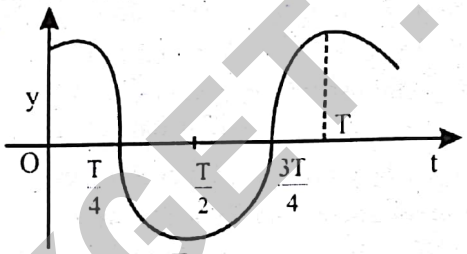

(47) **Which of the following explains that galaxies are receding from us?**

(a) Black holes (b) Red shift (c) Blue shifted (d) All

(48) **The angular frequency of mass spring-system**

(a) $\sqrt{\frac{m}{k}}$ (b) $\frac{m}{k}$ (c) $\sqrt{\frac{k}{m}}$ (d) $\frac{k}{m}$

(49) **The displacement-time graph of a particle executing S.H.M. is shown. Which of the following statement (s) is/are true?**

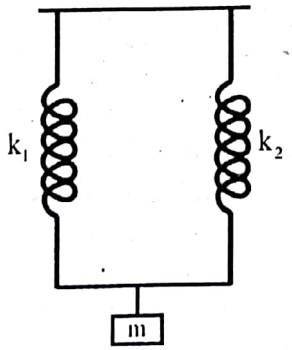

(a) The acceleration is maximum at t = T

(b) The force is zero at $t = \frac{3T}{4}$

(c) The potential energy equals the total energy at $t = \frac{T}{2}$

(d) All of these

(50) **In the arrangement shown in the figure for vertical oscillations of the mass m the period is:**

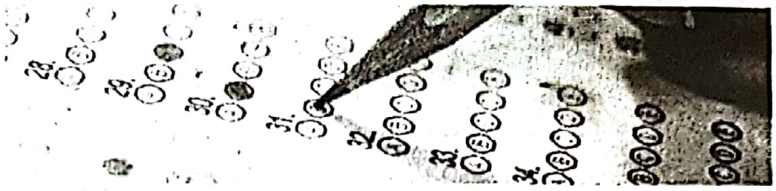

(a) $T = 2\pi\sqrt{\frac{m}{k_1 + k_2}}$ (b) $T = 2\pi\sqrt{\frac{k_1 + k_2}{m}}$

(c) $T = 2\pi\sqrt{\frac{m(k_1 + k_2)}{k_1 k_2}}$ (d) $T = 2\pi\sqrt{\frac{mg}{k_1 + k_2}}$

ECAT PHYSICS CHAPTER-9+10

(1) Today we believe that light has

(a) wave nature (b) particle nature (c) dual nature (d) all of these

(2) A monochromatic plane wave of speed 'c' and wavelength λ is diffracted at a small aperture.

The time during which a portion of the wavefront XY reaches at 'P' will be

(a) $\frac{3\lambda}{2C}$ (b) $\frac{3\lambda}{C}$

(c) $\frac{2\lambda}{C}$ (d) $\frac{4\lambda}{C}$

(3) According to Huygen's theory light travels in the form of

(a) proton (b) corpuscles (c) wave front (d) electron

(4) Interference and polarization of light support.

(a) wave nature (b) particle nature

(c) Quantum nature (d) electromagnetic nature

(5) Fringe width can be increased by decreasing

(a) silts reparation (b) λ

(c) distance of screen from slits (d) area of slit

(6) A grating has 500 lines per mm. its grating element is

(a) 2×10^{-2}m (b) 2×10^{-2}cm (c) 2×10^{-6}m (d) 2×10^{-6}cm

(7) The blue colour of sky is due to

(a) reflection (b) polarization (c) diffraction (d) scattering

(8) The speed of light in vacuum depends upon

(a) amplitude (b) λ (c) frequency (d) none of these

(9) If YDSE is shifted into the water then fringe spacing

(a) will decrease (b) will increase (c) will remain same (d) will disappear

(10) Huygen's principle used to

(a) locate wave front (b) explain diffraction

(c) determine speed of light (d) all

(11) The distance between two successive wave front is

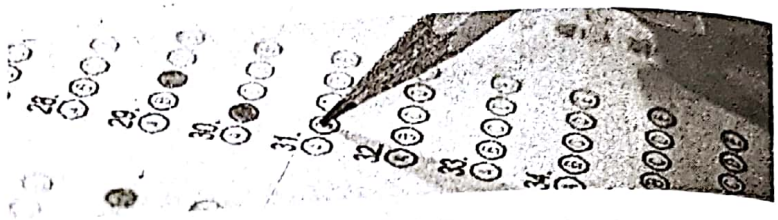

(a) wavelength (b) $\frac{\lambda}{2}$ (c) 2λ (d) 3λ

(12) Newton's rings are formed due to

(a) reflection (b) interference (c) refraction (d) all

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(13) In Young's experiment, fringe spacing is

(a) $\frac{\lambda}{Ld}$ (b) $\frac{d}{\lambda L}$ (c) $\frac{\lambda L}{d}$ (d) $\frac{L}{\lambda d}$

(14) Which one is optically active substance?

(a) sodium chlorate (b) sugar solution (c) quartz (d) all

(15) The plane polarized light can be achieved by

(a) selective obsorption (b) scattering by small particles

(c) reflection from surfaces (d) all of these

(16) An ordinary incandescent light emits

(a) polarized light (b) monochromatic light

(c) unpolarized light (d) ultraviolet light

(17) X-rays can be used for observing

(a) diffraction (b) polarization (c) interference (d) all

(18) The image formed by the objective of a compound microscope is

(a) real and enlarged (b) virtual and enlarged

(c) virtual and diminished (d) real and diminished

(19) The material used to obtain plane polarized light are called

(a) dichroic substance (b) solids

(c) semiconductor (d) all

(20) The diffraction gratting can be used to find

(a) speed of light (b) refraction index

(c) λ (d) frequency

(21) Resolving power of diffraction gratting is

(a) N x m (b) $\frac{\lambda L}{d}$

(c) N / m (d) $\frac{\Delta\lambda}{\lambda}$

(22) One angstrom is equal to

(a) 10^{-10}m (b) 10^{-12}cm (c) 10^{-8}m (d) both a and b

(23) Diffraction is a special type of

(a) polarization (b) reflection (c) interference (d) refraction

(24) Young's experiment proves

(a) particle nature (b) carpuscular nature (c) wave nature (d) all of these

(25) Light from sun reaches the earth in the form of

(a) circular wave front (b) plane wave front

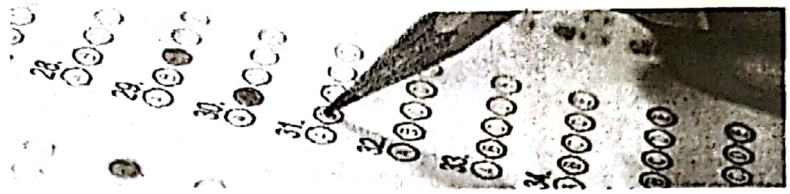

(c) cylindrical wave front (d) all of these

(26) Which cannot be polarized

(a) x-rays (b) ultraviolet (c) infrared (d) sound wave

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(27) **Bending of light around the edges of obstacle is called**

(a) diffraction (b) polarization (c) reflection (d) all of thane

(28) **Interference in thin film depends upon**

(a) angle of incidence (b) thickness of film (c) nature of film (d) all of these

(29) **Standard meter was defined by Michelson using light emitted from**

(a) cesium (b) cadmium (c) platinum (d) Gold

(30) **A compound microscope has an eye piece of focal length 10 cm and an objective of focal length 4 cm. The magnification of an object is placed at a distance of 5 cm from the objective so that the final image is formed at the least distance of distance vision (D=20 cm) is**

(a) 10 (b) 11 (c) 12 (d) 13

(31) **In Newton rings central spot for transmitted rays will appear**

(a) white (b) either a orb (c) dark (d) red

(32) **Two light rays which are not coherent cannot**

(a) diffract (b) polarized (c) interfere (d) all

(33) **If moveable mirror in interferometer moved through λ the number of fringes are observe**

(a) 1 (b) 3 (c) 2 (d) 4

(34) **A fringe is a locus of**

(a) constant amplitude (b) constant intensity

(c) constant phase (d) same wavelength

(35) **The refractive index of multi-graded index fiber _____ from core to periphery**

(a) decreases (b) increases

(c) remain same (d) Some time increases and some time decreases

(36) **For large magnification of a telescope**

(a) fo increases (b) both a and c

(c) fe decreases (d) No change in f_o and f_e

(37) **The image obtained in case of simple microscope is**

(a) virtual (b) magnified (c) erect (d) all

(38) **The sunlight after passing through Polaroid is**

(a) polarized (b) partially polarized (c) un-polarized (d) longitudinal waves

(39) **The light signal must be regenerated by**

(a) transmitter (b) receivers (c) repeaters (d) all

(40) **Power of lens of focal length 20cm is**

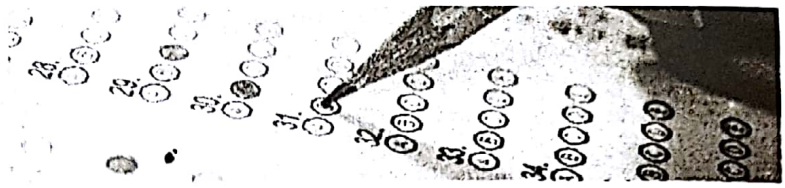

(a) 20 diopters (b) 5 diopters (c) $\frac{1}{20}$ diopters (d) $\frac{1}{5}$ diopters

(41) **The speed of light in material depends on**

(a) refractive index (b) *frequency* (c) amplitude (d) all

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(42) **The speed of light in air is c then speed in any other medium v is**

(a) $v = c$ (b) $v > v$ (c) $v < c$ (d) $v \geq c$

(43) **Spectrometer is used to find**

(a) refractive index (b) angle of deviation of prism

(c) wave length (d) all of these

(44) **For large magnification of telescope fe should be**

(a) small (b) infinity

(c) large (d) of intermediate value

(45) **Power is lost in optical fiber is due to**

(a) diffraction (b) refraction

(c) reflection (d) scattering and absorption

(46) **A polarizer reduces the intensity of an unpolarised light by**

(a) 80% (b) 60% (c) 50% (d) 40%

(47) **Unpolarised light converts to partially or plane polarized light by many processes. Which of the following does not do that?**

(a) reflection (b) diffraction (c) double refraction (d) scattering

(48) **The planes of vibration and polarization are**

(a) Orthogonal (b) parallel

(c) Non-existent (d) orthogonal and parallel

(49) **How should people wearing their spectacles work with a microscope?**

(a) They should keep on wearing their spectacles

(b) They should take off their spectacles

(c) They may either put on their spectacles or they may take off their spectacles; it makes no difference

(d) they cannot use the microscope at all

(50) **The magnifying power of telescope can be increased by**

(a) increasing focal length of eye-piece (b) increasing the distance of object

(c) fitting eye-piece of low power (d) fitting eye-piece of high power

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

ECAT PHYSICS CHAPTER-11

(1) Pressure of a gas is written

(a) $\frac{1}{3}\rho < v^2 >$ (b) $\frac{3}{2}\rho(v)$ (c) $\frac{1}{3}\rho(v)$ (d) $\frac{1}{3}\rho v^2$

(2) The value of Boltzman constant is

(a) 1.38×10^{23} JK (b) 1.38×10^{-23} JK^{-1} (c) 1.38×10^{-23} JK (d) 1.38×10^{26} JK^{-1}

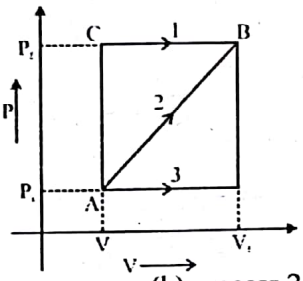

(3) At constant pressure graph between V and T is

(a) Parabola (b) Hyperbola (c) Straight line (d) Circle

(4) For isothermal process internal energy

(a) Increases (b) Decreases (c) Remains same (d) Cannot predicted

(5) A system is taken from state A to B through three different paths 1, 2 and 3. The work done is maximum in

(a) process 1 (b) process 2
(c) process 3 (d) equal in all processes

(6) First law of thermodynamics is a statement of law of conservation of

(a) Mass (b) Heat (c) Energy (d) All

(7) The process in which no heat can enter or leave the system is

(a) Isobaric (b) Adiabatic (c) Isothermal (d) Isochoric

(8) Work done is maximum in

(a) Isothermal expansion (b) Adiabatic expansion
(c) Isobaric process (d) Isochoric process

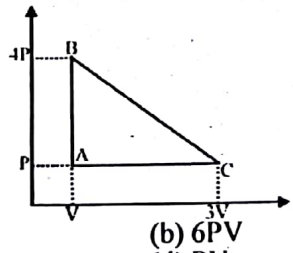

(9) The value of universal gas constant is

(a) 8.314 J mole K (b) 8.314 $Jmol^{-1}$ K^{-1}
(c) 8.314 j mole K^{-1} (d) 3.148 J $mole^{-1}$ K^{-1}

(10) Which of the following gases posses maximum root mean square velocity at a given temperature

(a) hydrogen (b) oxygen (c) nitrogen (d) helium

(11) An ideal gas is taken around the cycle ABCA as show in the PV diagram. The net work done by the gas during the cycle is

(a) 12PV (b) 6PV
(c) 3PV (d) PV

(12) Fahrenheit and centigrade have same reading at

(a) 46° (b) -40° (c) 32° (d) 40°

(13) Efficiency depends upon

(a) Temperature of source (b) Temperature of sink
(c) Both a and b (d) Working substance

(14) In Carnot cycle internal energy in one cycle

(a) Increases (b) Decreases (c) Zero (d)Remains constant

(15) The third stroke of petrol engine is

(a) Input stroke (b) Exhaust stroke (c) Power stroke (d) All of these

(16) The efficiency of diesel engine is

(a) 25 % to 30% (b) 30% to 35% (c) 35% to 40% (d) 30% to 40%

(17) The unit of entropy is

(a) JK (b) $J^{-1}K$ (c) JK^{-1} (d) $J^{-1}K^{-1}$

(18) Which one is correct

(a) Cp = Cv (b) Cv > Vp (c) Cv < Cp (d) $Cv \geq C_P$

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(19) **No entropy change is associated with**
(a) Adiabatic process (b) Isobaric process
(c) Isothermal process (d) Isochoric process

(20) **In adiabatic process**
(a) $W = -\Delta U$ (b) Entropy of system remains same
(c) $\Delta Q = 0$ (d) All of these

(21) **During adiabatic expansion temperature of system**
(a) Decreases (b) Increases (c) Remains same (d) 0

(22) **When heat is removed from system entropy of system**
(a) Increases (b) Decreases (c) Remains same (d) Zero

(23) **A process which cannot be retraced is**
(a) Irreversible (b) reversible (c) Either a or b (d) cyclic

(24) **Which one is correct**
(a) Cp – Cv = R (b) $\frac{Cp}{Cv} = \gamma$ (c) Cv – Cp = R (d) Both a and b

(25) **The curve represents isothermal process is called**
(a) Isotherm (b) Adiabatic (c) Both a and b (d) Either a or b

(26) **Which of the following is not a state function of a system**
(a) Temperature (b) Internal energy (c) Heat (d) Pressure

(27) **A gas expands under constant pressure P from V_1 to V_2. The work done by the gas is**
(a) $P(V_2 - V_1)$ (b) $P(V_1 - V_2)$ (c) $P(V_1^{\gamma} - V_2^{\gamma})$ (d) $P\left(\frac{1}{V_1} - \frac{1}{V_2}\right)$

(28) **Diatomic molecules of a gas have _____ K.E.**
(a) Translational (b) Vibrational (c) rotational (d) all of these

(29) **Triple point of water is**
(a) 273. 16 K (b) 273. 16°F (c) 273.16°C (d) 270°C

(30) **Which one is not adiabatic process**
(a) Escape of air from burst tyre (b) Cloud formation
(c) Slow expansion (d) rapid compression

(31) **Which engine has least efficiency?**
(a) petrol engine (b) Carnot engine
(c) diesel engine (d) Watt's steam engine

(32) **Internal energy of ideal gas depends**
(a) Volume (b) Temperature (c) Pressure (d) Path followed

(33) **Boltzman's constant is define as**
(a) $\frac{R}{N_A}$ (b) $\frac{N_A}{R}$ (c) $\frac{1}{RN_A}$ (d) RN_A

(34) **Efficiency of Carnot engine**
(a) depends upon T_1 and T_2 (b) depends upon working substance
(c) is 100% if $T_2 = 0$ K (d) None of these

(35) **If mean square velocity of gas molecules is doubled then pressure of gas will be**
(a) Double (b) Four time (c) Half (d) Remains same

(36) **During adiabatic compression change in internal energy 1 mole of a gas is 100J the work done is**
(a) 100 J (b) – 100J (c) 200 J (d) $\frac{1}{100} J$

(37) **Scale which is independent of working substance is**
(a) Fahrenheit (b) Centigrade (c) Kelvin (d) None of these

(38) **Change in temperature of a body 50°C. The change in temperature on Kelvin scale is**
(a) 323 K (b) 50 K (c) 223 K (d) 70 K

(39) **Starting with the same initial conditions, an ideal gas expands from volume V_1 to V_2 in three different ways. The work done by the gas is W_1 if the process is purely isothermal, W_2 if purely isobaric and W_3 if purely adiabatic. Then**
(a) $W_2 > W_1 > W_3$ (b) $W_2 > W_3 > W_1$
(c) $W_1 > W_2 > W_3$ (d) $W_1 > W_3 > W_2$

(40) **For which combination of working temperatures the efficiency of Carnot's engine is highest?**
(a) 100 K, 80 K (b) 80 K, 60 K
(c) 40 K, 20 K (d) 60 K, 40 K

ECAT PHYSICS CHAPTER-12+13

(1) Total resistance of network between A and C is

(a) 3.0 Ω (b) 4.25 Ω (c) 5.0 Ω (d) 3.75 Ω

(2) When a solid body is negatively charged by friction , it means that the body has

(a) acquired excess of electrons
(b) lost some protons
(c) acquired some electron and lost a lesser number of protons
(d) lost some positive ions

(3) The unit of electric field is not equivalent to

(a) $\frac{N}{C}$ (b) $\frac{V}{m}$ (c) $\frac{J}{C}$ (d) $\frac{J}{C.m}$

(4) A and B are two points in an electric field. If the work done in carrying 4.0 coulomb of electric charge from A to B is 16.0 joule the potential difference between A and B is

(a)zero (b) 4 V (b)2.0 v (d) 16V

(5) How many electrons will have a charge of one coulomb?

(a) 6.2×10^{18} (b) 5.2×10^{18} (c) 6.2×10^{19} (d) 5.2×10^{19}

(6) If a charge is moved against the coulomb force of an electric field

(a) work is done by the electric field (b) energy is used from some outside source
(c) The strength of the field is decreased (d) The energy of the system is decreased

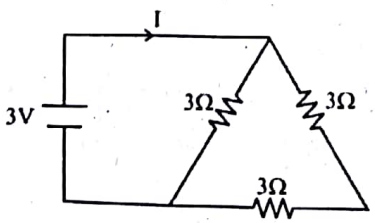

(7) Two point charges +2 coulomb and +6 coulomb repel each other with a force of 12 N. If a charge of -2 coulomb is given to each of these charges, the force will now be

(a) zero (b) 8 N (repulsive) (c) 8 N (attractive) (d) 16 N (attractive)

(8) A hollow sphere of copper is positively charged. Then the electric field inside the sphere is

(a) the same as the field at the surface (b) greater than the field at the surface
(c) less them the field at the surface but not zero (d) zero

(9) A 3V battery with negligible internal resistance is connected in a circuit as shown in a figure given. The current I in the circuit will be

(a) 1A (b) 2A
(c) 1.5 A (d) $\frac{1}{3}$A

(10) Conductivity is the

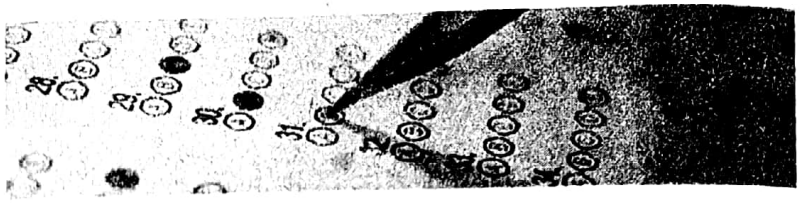

(a) reciprocal of current density (b) reciprocal of resistivity
(c) reciprocal of resistance (d) same as current

(11) The terminal potential difference of a cell when open circuited is

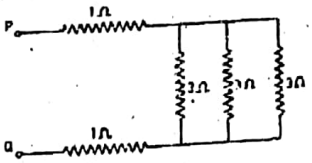

(a) E (b) $\frac{E}{2}$ (c) zero (d) ∞

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(12) What is resistance between P and Q in the following circuit?

(a) 3Ω (b) $\frac{1}{2}\Omega$

(c) $\frac{2}{3}\Omega$ (d) $\frac{3}{2}\Omega$

(13) Two thin infinite parallel plates have uniform charge densities + σ and -σ . The electric field in the space between them is

(a) $\sigma/2\varepsilon_0$ (b) $\sigma/60$ (c) σ/ε_0 (d) zero

(14) If RC is small, then capacitor will be charged and discharged

(a) slowly (b) quickly (c) with medium speed (d) with constant speed

(15) The electrostatic force between two point charges q_1 and q_2 at separation r is given by $F = kq_1 q_2 / r^2$ The constant k

(a) depends on the system of units only
(b) depend son the medium between the charges only
(c) depends on both the system of units and the medium between the charges
(d)is independent of both the system of units and the medium between the charges

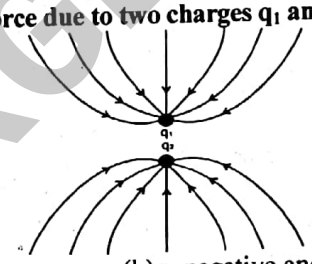

(16) The S I unit of permittivity of free space (ε_0) is

(a) $\frac{C}{Nm}$ (b) $\frac{C^2}{(Nm)^2}$ (c) $\frac{Nm^2}{C^2}$ (d) $\frac{C^2}{Nm^2}$

(17) Two charges are in vacuum at a distance d apart. The force between them is F. If a medium of dielectric constant 4 is introduced between them, the force will now be

(a) 4F (b) F/2 (c) 2F (d) F/4

(18) The given figure is a plot of lines of force due to two charges q_1 and q_2. Figure out the sign of the charges

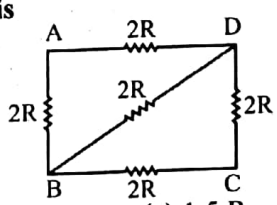

(a) both negative (b)q_1 negative and q_2 positive
(c) both positive (d) q_1 positive and q_2 negative

(19) Two plates are 2cm apart. If a potential difference of 10 volt s is applied between the plates. The electric field between the plates will be

(a)20 N/C (b) 250 N/C (c) 500 N/C (d) 250 N/C

(20) The total resistance across AB is

(a) 0.8 R (c) 1.5 R
(b) 1.25 R (d) None of these

(21) The space between the plates of a capacitor is filled by a liquid of dielectric constant k. The capacitance of the capacitor

(a) increases by a factor k (b) decreases by a factor k
(c) increases by a factor k^2 (d) decreases by a factor k^2

(22) Electrical energy used per second is given by

(a) VI (b) I^2R (c) $\frac{V^2}{R}$ (d) all of these

For more Entry Test books and MCQS visit PAKGET.PK

(23) **The number of terminals in a rheostat are**
(a) 4 (b) 3 (c) 2 (d) 1

(24) **If the potential difference across a conductor is doubled the rate of heat production will become**
(a) double (b) $\sqrt{2}$ times (c) half (d) four times

(25) **Internal resistance and emf of a cell can be determined by an instrument**
(a) CRO (b) AVO meter
(c) both CRO & AVO meter (d) potentiometer

(26) **The colour code of 10Ω resistance with 5% tolerance is**
(a) black, black, brown, silver (b) brown, black, black, gold
(c) black, brown, black, gold (d) brown, brown, black, gold

(27) **Resistivity of a conductor depends upon.**
(a) temperature
(b) nature of the material
(c) both temperature and nature of the material
(d) temperature, length & nature of the material

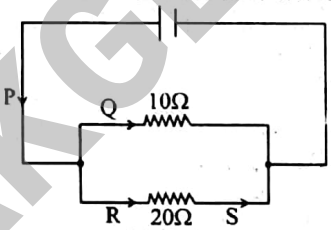

(28) **Conventional current flows from**
(a) low potential to high potential (b) high potential to low potential
(c) high temperature to low temperature (d) low temperature to high temperature

(29) **A voltage of 600V can be obtained virtually from**
(a) dry battery (b) nickel cadmium battery
(c) head & tail of an eel (d) transformer

(30) **In electrolysis process of $CuSO_4$, Cu is deposited**
(a) On Anode (b) On Cathode
(c) Either anode or cathode (d) Can not be deposited.

(31) **Neutral zone in electric field of two similar charges is region where**
(a) both positive and negative charges are present
(b) equal quantity of both positive and negative charges are present
(c) an electric dipole exists
(d) no electric field line passes

(32) **If P, Q, R, and S represents the currents in the circuit which statement is correct?**

(a) P is greater than Q (b) R is greater than S
(c) Q is equal to R (d) S is equal to P

(33) **The specific resistance of a wire**
(a) varies with its length
(b) varies with its mass
(c) varies with its cross section
(d) does not depend on its length, cross section and mass

(34) **Three resistances, each of 4 Ω , are connected to form a triangle. The resistance between any two terminals is**
(a) 2 Ω (b) 6 Ω (c) 8/3 Ω (d) 12 Ω

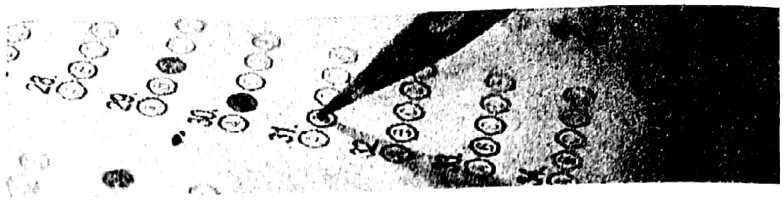

(35) **Kirchhoff's two laws for electrical circuits are manifestations of the conservation**
(a) charge only (b) both energy and momentum
(c) energy only (d) both charge and energy

(36) **Potential due to charge q at distance 1m is 5V, at distance 3m will be**
(a) $\frac{5}{3}$V (b) $\frac{3}{5}$V (c) $\frac{7}{3}$V (d) $\frac{3}{7}$V

(37) **A student has 10 resistors, each of resistance r. The minimum resistance that can be obtained by him using these resistors is**
(a) 10 r (b) r/100 (c) r/10 (d) r/5

(38) **Coulomb's law is applicable on**
(a) spherical distribution of charge (b) line distribution of charge
(c) surface distribution of charge (d) point charge

For more Entry Test books and MCQS visit PAKGET.PK

(39) **Two electrons are removed from a conductor the charge on it is**
(a) 1.6×10^{-19} C (b) 3.2×10^{-19}C (c) -3.2×10^{-19}C (d) neutral

(40) **Two point charges are separated by a distance of 4m.The force between them is 4N. What is the force between the charges, when the distance between them is 1m**
(a) 16 N (b) 1N (c) 64N (d) 32N

(41) **Two lines of force**
(a) Intersect in non – uniform field (b) Intersect in uniform field
(c) Intersect at a far distance from charge (d) never intersect

(42) **Capacitance with air is 10F, if a dielectric of $\varepsilon_r = 100$ is inserted then new capacitance**
(a) 1000 F (b) 1000 F (c) 10 ηF (d) 100 F

(43) **In inkjet printers computer send instructions to**
(a) ink pump (b) deflecting plates (c) charging electrodes (d) gutter

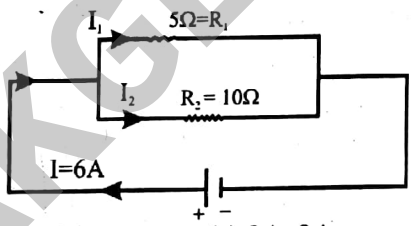

(44) **Uniform electric field exist**
(a) near positive charge
(b) near negative charge
(c) between two equal and oppositely charged plates
(d) between two equal and oppositely charged infinite plates

(45) **The electric field between the oppositely charged plates of surface charge density σ is σ/ε_0. If one of the plates is removed then electric field becomes**
(a) zero (b) $2\sigma/\varepsilon_0$ (c) $\sigma/2\varepsilon_0$ (d) $\sigma/4\varepsilon_0$

(46) **A large isolated metal sphere of radius r carries a fixed charge. A small charge is placed at a distance d from its surface. It experiences a force which is**
(a) Independent of r and d (b) Proportional to $r^2 + d^2$
(c) Proportional to r^2 (d) Inversely proportional to $(r + d)^2$

(47) **If electric intensity $\vec{E}$ is along the X-axis, then the equipotenital surfaces are parallel to**
(a) XOY plane (b) XOZ plane (c) YOZ plane (d) None of these

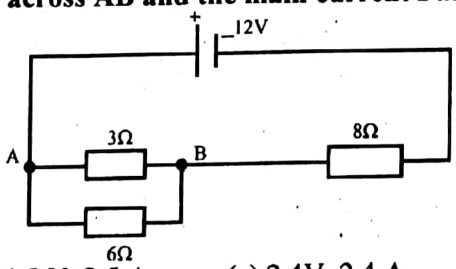

(48) **The current flowing through R_1 and R_2 will be**

(a) 4A, 2A (b) 2A, 4A (c) 3A, 3A (d) 6A, 6A

(49) **When we double the voltage in a simple electric circuit, we double the**
(a) Current (b) Power (c) Resistance (d) Both (a) and (b)

(50) **Fig shows a battery of 12V and negligible internal resistance connected to three resistors. The potential difference across AB and the main current I are**

(a) 7.5V, 6A (b) 4.5 V, 2.5 A (c) 2.4V, 2.4 A (d) 2.4 V, 1.2A

ECAT PHYSICS CHAPTER-14+15

(1) **The SI unit of galvanometer constant $\frac{C}{BAN}$ is**

(a) $\frac{amp}{radian}$ (b) $N-m/\sec^2$

(c) N-amp/radian (d) None of these

(2) **A uniform electric field and a uniform magnetic field exist in a region in the same direction .An electron is projected with velocity pointed in the same direction. The electron will**

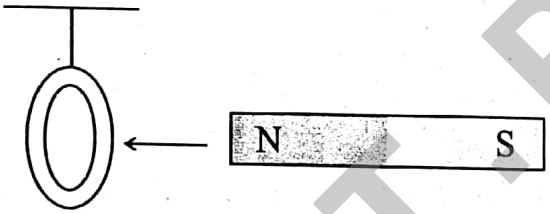

(a)turn to its right

(b)turn to its left

(c) keep moving in the same direction but its speed will increase

(d) keep moving in the same direction but its speed will decrease

(3) **A metallic circular ring is suspended by a string and is kept in a vertical plane. When a magnet is approached towards the ring then it will**

(a) remain stationary (b) get displaced away from the magnet

(c) get displaced towards the magnet (d) nothing can be said

(4) **The strength of the magnetic field due to a long straight conductor is**

(a) the same everywhere around the conductor

(b) inversely proportional to the distance form the conductor

(c) inversely proportional to the square of the distance from the conductor

(d) inversely proportional to the cube of the distance from the conductor

(5) **In order to increase the current sensitivity of a moving coil galvanometer the**

(a) number of turns of the coil should be increased

(b) strength of the magnetic field should be increased

(c) area of the coil should be increased

(d) all of these

(6) **Current I is flowing in a long conducting wire, the magnetic induction at a distance r from it is 0.4 tesla, then its value at double the distance will be**

(a) 1.6 T (b) 0.2 T (c) 0.8 T (d) 0.1 T

(7) **An a moving coil galvanometer, the deflection of the coil θ is related to electric current z by the relation**

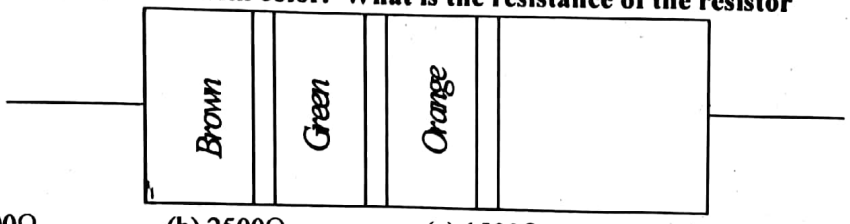

(a) $I \propto \tan\theta$ (b) $I \propto \theta$ (c) $I \propto \theta^2$ (d) $I \propto \sqrt{\theta}$

(8) **A strong magnetic field is applied on a stationary electron. Then the electron**

(a) moves in the direction of the field (b) moves opposite to the field

(c) starts spinning (d) remains stationary

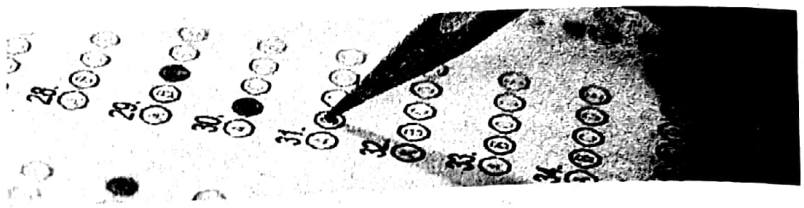

(9) **Figure shows a resistor with color. What is the resistance of the resistor**

(a) 15000Ω (b) 2500Ω (c) 1500Ω (d) 20,000Ω

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

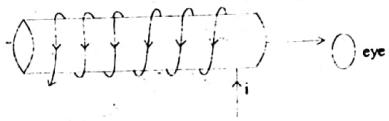

(10) **To make the field radial in a moving coil galvanometer**
(a) the number of turns in the coil is increased
(b) magnet is taken in the form of horse shoe
(c) poles pieces cut concave
(d) coil is wound on an aluminum frame

(11) **Lorentz force is given by**
(a) $q\,(\vec{E} + \vec{v}\times\vec{B})$ (b) $q\,(\vec{E} - \vec{v}\times\vec{B})$ (c) $q\,(\vec{E} + \vec{v}.\vec{B})$ (d) $q\,(\vec{E}\times\vec{B} + \vec{v})$

(12) **When current of coil changes from 8A to 2A in 3×10^{-2} S, the emf induced in the coil is 2V. The self inductance of the coil (in mH)**
(a) 1 (b) 5 (c) 20 (d) 10

(13) **A current solenoid is carried towards a conducting loop as shown. The direction of induced current in the loop as by an observer on other side of the loop will be**

(a) Towards west (b) Towards east (c) Clockwise (d) Anticlockwise

(14) **A coil is rotated in a uniform magnetic field about an axis perpendicular to the field. The emf indeed in the coil would be maximum when the plane of the coil is**
(a) parallel to the filed (b) at 45° to the field
(c) perpendicular to the field (d) none of them

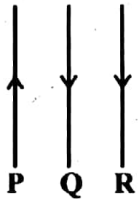

(15) **A coil having number of turns N and cross- sectional area A is rotated in a uniform magnetic field B with an angular velocity ω. The maximum value of the emf indeed in it is**
(a) $\frac{NBA}{\omega}$ (b) $\frac{NBA}{\omega^2}$ (c) $NBA\omega$ (d) $NBA\omega^2$

(16) **The mutual inductance of a pair of coils is 2H, If the current in one of the coils changes from 10A to zero in 0.1s, the emf induced in the other coil is**
(a)2V (b) 0.2 V (c) 20V (d) 200 V

(17) **Eddy currents are produced in a material when it is**
(a) heated (b) placed in an electric field
(c) placed in a time varying magnetic field (d) placed in a uniform magnetic field

(18) **An emf of 5 V is induced in an inductance when the current in it changes at a steady rate for 3 A to 2 A in 1 milli seconds. The value of the inductance is**
(a) 5 mH (b) 5000H (c) 5 H (d) zero

(19) **Three parallel wires carrying equal currents as shown in fig the net force experienced by Q due to currents in P and R is**

(a) Into the plane of paper (b) Out of plane of paper
(c) Towards of left (d) Towards right

(20) **To induce an emf in a coil the linking magnetic flux**
(a) must decrease (b) must remain constant
(c) must increase (d) can either increase or decrease

(21) **A current carrying loop is placed in a uniform magnetic field. The torque acting on it does not depend upon**
(a) shape of the loop (b) area of loop (c) value of current (d) magnetic field

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(22) The motional emf depend upon
(a) strength of magnet (b) length of conductor
(c) speed of the conductor (d) all of these

(23) Core of a dynamo is laminated because
(a) magnetic field increase
(b) magnetic saturation level in core increase
(c) residual magnetism in core decrease
(d) loss of energy in core due to eddy current decreases

(24) A step-up transformer is used on a 120 V line to provide a potential difference of 2400 V. If the primary coil has 75 turns, the number of turns in the secondary coil is
(a) 1500 (b) 150 (c) 1200 (d) 1575

(25) Laminated core in a transformer is used to reduce
(a) Eddy current losses (b) Hysteresis losses
(c) iron losses (d) heat losses due to resistance

(26) When current flows through a conductor in a direction out of the plane of paper the magnetic field has direction
(a) from left to right (b) from right to left
(c) clock wise (d) anti clockwise

(27) In a loop of wire current is flowing in anticlockwise direction. It acts as
(a) north pole (b) south pole
(c) neutral (d) may be north or south pole

(28) When galvanometer used as ohmmeter give full (maximum) deflection it indicates
(a) zero resistance (b) infinite resistance
(c) small resistance (d) intermediate resistance

(29) When north pole of a magnet is moved towards the face of a coil then the face of coil act as
(a) north pole (b) south pole
(c) neutral (d) we cannot predict about it

(30) The construction of D.C motor is similar to
(a) galvanometer (b) D.C generator (c) transformer (d) A.C generator

(31) In which of the following the commutators are used
(a) A.C generator (b) D.C generator (c) D.C motor (d) both b and c

(32) The loss a power in transformer is due to
(a) eddy current (b) magnetic hysteresis (c) resistance of coils (d) all

(33) The energy stored in a capacitor and in an inductor in

	Capacitor	Inductors
(a)	Electric field	Electric field
(b)	Magnetic field	Magnetic Field
(c)	Electric field	Magnetic field
(d)	Magnetic field	Electric field

(34) Torque on current carrying coil is maximum when outward normal to the plane of coil is
(a) parallel to magnetic field (b) perpendicular to magnitude field
(c) inclined at 45° to magnetic field (d) inclined at 60° to magnetic field

(35) When a current carrying conductor is placed in a magnetic field. It moves from a region of
(a) stronger to weak field (b) weak to strong field
(c) strong to weak if current is large (d) weak to strong if current is large

(36) The direction of force experience by a charged particle moving in a magnetic field will be
(a) parallel to the field
(b) opposite to the field
(c) parallel to its direction
(d) perpendicular to both the field and velocity vector

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(37) **The value of e/m of an electron**
(a) $9.43 \times 10^{-19} Ckg^{-1}$ (b) $9.43 \times 10^{-31} Ckg^{-1}$
(c) $1.76 \times 10^{11} Ckg^{-1}$ (d) $9.43 \times 10^{-27} Ckg^{-1}$

(38) **The switch used in current measuring part of AVO meter for measuring of different currents is called**
(a) range switch (b) power switch (c) selective switch (d) all of these

(39) **A moving charged is subjected to an external magnetic field. The change in the kinetic energy of the particle**
(a) increases with the increase in the field strength
(b) decreases with the increase in the field strength
(c) is always zero
(d) depends upon whether the field is uniform or non-uniform

(40) **A long solenoid has radius a and number of turns per unit length n. If it carries a current I, then the magnetic field on its axis is directly proportional to**
(a) anI (b) nI (c) $\frac{nI}{a}$ (d) n^2I

(41) **A vertical wire carrying a current in the upward direction is placed in a horizontal magnetic field directed towards north. The wire will experience a force towards**
(a) North (b) South (c) East (d) West

(42) **The number of coils are wounded around an iron cylinder which is rotated in the magnetic field is called**
(a) Slip rings (b) Armature (c) Commutator (d) Electromagnet

(43) **Faraday's generator with which he was able to produce a continuous induced current called**
(a) Tri polar generator (b) Multipolar generator
(c) Dipolar generator (d) Homopolar generator

(44) **If L and R denote inductance and resistance, the dimensional formula for L/R is**
(a) $M^oL^oT^o$ (b) M^oL^oT (c) MLT^2 (d) $M^2L^oT^2$

(45) **A.C power is transmitted from a power house at a high voltage as**
(a) The rate of transmission is faster at high voltage
(b) It is more economical due to less power loss
(c) Power cannot be transmitted at low voltages
(d) A precaution against theft of transmission lines

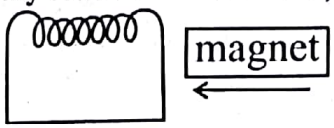

(46) **The ratio of average induced emf to the rate of change of current in the coil is called**
(a) Self inductance (b) Mutual inductance
(c) Self induction (d) Mutual induction

(47) **The induced current in a loop can be increased by:**
(a) using a stronger magnetic field (b) moving the loop faster
(c) replacing loop by a coil of many turns (d) all of these

(48) **Which one of the following is not present in A.C generator?**
(a) Armature (b) Magnet (c) Slip rings (d) Commutator

(49) **The notation for Henry is**
(a) $Vs^{-1}A$ (b) $N.m.A^{-1}$ (c) $V^{-1}s.A$ (d) $V.s.A^{-1}$

(50) **A magnet is pushed horizontally towards a coil of wire, inducing an emf in the coil**

In which direction does the induced emf make the coil move?
(a) Away from the magnet (b) Toward the magnet
(c) Down word (d) Upward

ECAT PHYSICS CHAPTER-16+17

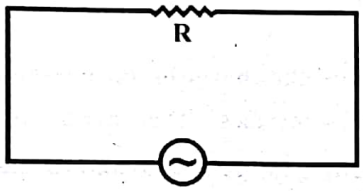

(1) The root – mean – square value of the alternating current is equal to

(a) twice the peak value
(b) $(1/\sqrt{2}$ times the peak value
(c) half the peak value
(d) equal to the peak value

(2) If the instantaneous current in a circuit is gives by I = 2 cos (wt + Φ) ampere, the rms value of the current is

(a) 2A (b) $2\sqrt{2}$ A (c) $\sqrt{2}$ A (d) zero

(3) In the following circuit diagram if the frequency of the source is double then the value of current flowing in R will become

A) Double
B) Half
C) Remain unchanged
D) Four times

(4) The capacitive reactance of a capacitor in D.C circuit is

(a) 0 (b) ωC (c) $\frac{1}{\omega c}$ (d) ∞

(5) When an ac source is connected across a resistor

(a) the current leads the voltage
(b) the current and voltage are in phase
(c) the current lags behind the voltage
(d) anyone of the above may be true depending upon the value of the resistance

(6) In the resonance, the condition is

(a) $X_L + X_C = 0$ (b) $X_L - X_C = 0$ (c) $X_L \pm X_C = 0$ (d) $X_L + X_C = \infty$

(7) The average power dissipation in a pure capacitance is

(a) $\frac{1}{2}CV^2$ (b) CV^2 (c) $2CV^2$ (d) 0

(8) An LCR series circuit contains L = 8H, C = 0.5 μ F and R = 100 Ω. The resonant frequency of the circuit is

(a) $\frac{1000}{\pi}$ Hz (b) $\frac{250}{\pi}$ Hz (c) $\frac{500}{\pi}$ Hz (d) $\frac{125}{\pi}$ Hz

(9) The value of impedance in series LCR circuit at resonance is

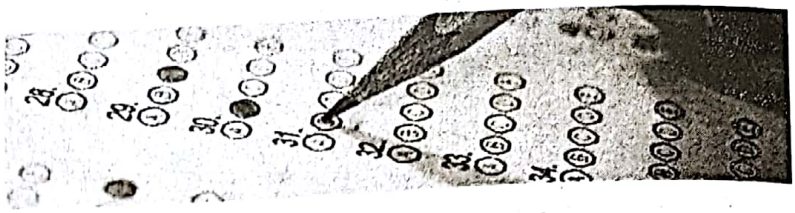

(a) minimum (b) maximum (c) ∞ (d) zero

(10) The young's modulus for a perfectly rigid body is

(a) zero (b) infinite (c) 1 (d) none of these

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(11) Energy stored per unit volume of a stretched wire is

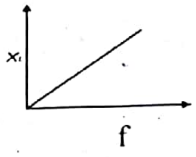

(a) $\left(\frac{1}{2}\right)$ × load × extension

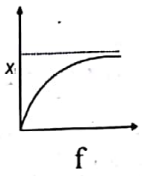

(b) stress × strain

(c) load × stress

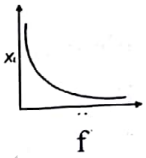

(d) $\left(\frac{1}{2}\right)$ × stress × strain

(12) Which one of the following represents the variation of inductive reactance (X_L) with the frequency of the voltage source?

(a) 

(b) 

(c) 

(d) 

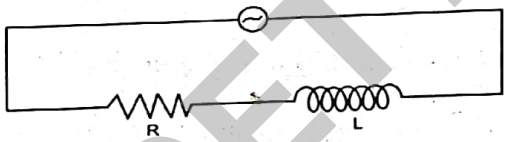

(13) As the charging potential alternates, the charge on the antenna

(a) remain same (b) constantly reverses (c) always positive (d) always negative

(14) The impedance of a circuit containing inductance L and resistance R is given by

(a) LR (b) $\sqrt{R^2+\omega^2L^2}$ (c) L/R (d) $\sqrt{\omega^2R^2+L^2}$

(15) In the given LR circuit, the source has angular frequency ω. The power factor of the circuit is

(a) $\frac{L}{R}$ (b) $\frac{R}{\sqrt{R^2+\omega^2L^2}}$ (c) R/ωL (d) R + ωL

(16) The force required to stretch a steel wire 1 sq. cm in cross section to double its length is (given y = 2×10^{11} N/m^2)

(a) 10^7 N (b) 10^{11} N (c) 2×10^7 N (d) 2×10^{11} N

(17) The young's modulus of a wire of length L and radius r is Y. If the length is reduced to L/2 and radius to r/2, its young's modulus will be

(a) Y/2 (b) 2Y (c) Y (d) 4Y

(18) If the work done in stretching a wire by 1mm is 2 J, the work necessary for stretching another wire of the same material but double the radius and half the length by 1 mm is

(a) 16 J (b) 4 J (c) 8 J (d) (1/4) J

(19) A copper wire and a steel wire of the same diameter and length are connected end to end and a force is applied which stretches their combined length by 1 cm. Then the two wires have

(a) the same stress and strain (b) the same strain but different stresses

(c) the same stress but different strain (d) different stresses and strains

(20) The maximum stress which a body can bear is called its

(a) ultimate tensile strength (b) permanent stress

(c) elastic stress (d) all type of stress

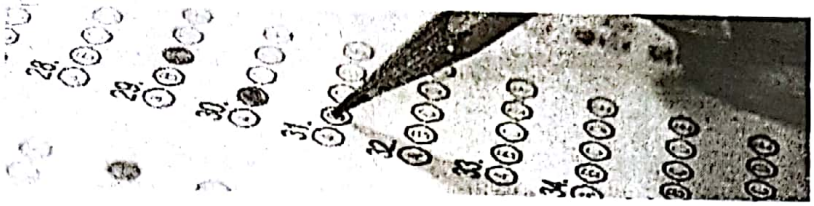

(21) Such substances which breaks soon after they cross elastic limit is called

(a) weak substances (b) brittle substances

(c) ductile substances (d) polymeric substances

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(22) **Energy bands in solids which are either partially filled or empty are called**

(a) valance band (b) forbidden band (c) conduction band (d) inner most band

(23) **Domains contain nearly**

(a) 10^{08}-10^{09} atoms (b) 10^{15}-10^{20} atoms (c) 10^{12}-10^{16} atoms (d) 10^{18}-10^{26} atoms

(24) **After curie temperature iron become**

(a) ferromagnetic (b) paramagnetic (c) diamagnetic (d) super conductor

(25) **The value of reverse current which is required by a substance for its demagnetization is called**

(a) hysteresis loss (c) coercive current (b) remanence current (d) relative current

(26) **A.C voltage source changes its polarity_____ in one period**

(a) once (b) thrice (c) twice (d) 4 times

(27) **Most of A.C meter are calibrated to read**

(a) average value (b) peak value (c) rms value (d) mean square value

(28) **Minimum number of atoms arranged in solid showing whole characteristics of the solid is called**

(a) crystal (b) unit cell (c) molecules (d) all are correct

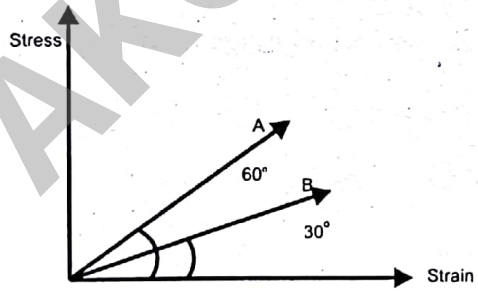

(29) **In resonance parallel circuit branch currents (I_L&I_C) may each be greater than**

(a) source voltage (b) Vc (c) source current (d) Vc angle

(30) **Metal detectors works on the principle of**

(a) Doppler effects (b) organ pipe (c) beats (d) all of these

(31) **The stress versus strain graph for two wires A and B is shown in the figure. If Y_A and Y_B are the young's moduli of the materials, then**

(a) $Y_A = 2Y_B$ (b) $Y_A = Y_B$ (c) $Y_B = 3Y_A$ (d) $Y_A = 3Y_B$

(32) **If the capacitance of a tuning circuit is doubled and inductance is halved then its frequency**

(a) doubles (b) is quadrupled (c) is halved (d) remains same

(33) **When the temperature of a semiconductor is increased its electrical conductivity.**

(a) increases (b) decreases

(c) remains the same (d) first increases and then decreases

(34) **In a semi – conductor the forbidden energy gap between the valance band and the conduction band is of the order of**

(a) 1 eV (b) 1 KeV (c) 3 eV (d) 1 MeV

(35) **To obtain a p – type semiconductor, we need to dope pure silicon with**

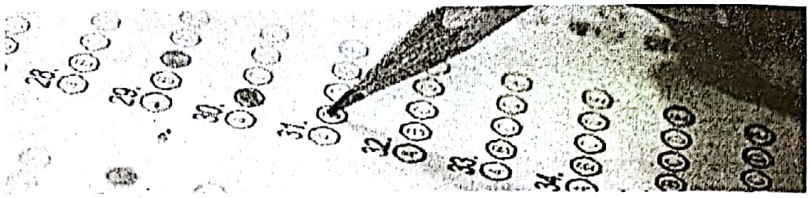

(a) aluminium (b) oxygen (c) phosphorous (d) germanium

(36) **If germanium has to be doped with a donor impurity, the foreign atom should be**

(a) tetravalent (b) trivalent (c) pentavalent (d) none of the above

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(37) **In an insulator, the forbidden energy gap between the valance band and the conduction band is of the order of**

(a) 1 MeV (b) 1 eV (c) 0.1 MeV (d) 5 eV

(38) **A hole in a p – type semi – conductor is**

(a) an excess electron (b) a missing atom (c) a missing electron (d) a donor level

(39) **Majority carriers in a semi – conductor are**

(a) holes in n – type and electron in p – type (b) holes in both n–type and p-type

(c) electrons in n–type and holes in p–type (d) electrons in both n and p–type

(40) **In which of the following sequence are the E.M radiation in increasing order of frequency**

(a) infra red, radio, visible, x-ray (b) Radio, visible infra red, γ-ray

(c) Radio, infrared, visible, γ-ray (d) X-ray visible, intra red, radio

(41) **In R.L series circuit with increase in frequency of A.C source the impedance of the circuit**

(a) increase (b) remains same

(c) decreases (d) may increase or decrease

(42) **In case of R.C series circuit**

(a) I leads v by $\pi/2$ (b) I and v are in phase

(c) I lags V by $\pi/2$ (d) none

(43) **Power in A.C circuit is given by**

(a) $P = VI$ (b) $P = VI\cos\theta$ (c) $P = VI\sin\theta$ (d) $p = VI\tan\theta$

(44) **In three phase AC supply the P.D across two live wires is**

(a) $\sqrt{2}V$ (b) $\sqrt{5}V$ (c) $\sqrt{3}V$ (d) $\sqrt{7}V$

(45) **In metal detector when a metal object is brought near the search coil its inductance**

(a) increase

(b) decrease

(c) Increases or decrease depend upon A.C frequency

(d) remains same

(46) **choke coil has**

(a) large resistance, small inductance (b) large resistance, large inductance

(c) small resistance, small inductance (d) small resistance large inductance

(47) **Super conductor with a critical temperature above 77 K are called**

(a) low temp super conductor (b) high temp super conductor

(c) super conductors does not exist above 77 K (d) moderate temp super conductor

(48) **In an atom the magnetic field exist due to**

(a) orbital motion of electron (b) spinning of proton

(c) spinning of electron (d) all

(49) **All the magnetic materials lose their magnetic properties when**

(a) dipped in water (c) dipped in oil

(b) brought near a piece of iron (d) strongly heated

(50) **The concept of domain is related with**

(a) non-magnetic (b) paramagnetic (c) diamagnetic (d) ferromagnetic

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

ECAT PHYSICS CHAPTER-18+19

(1) Which one of the following is Compton wavelength

(a) $\frac{hc}{\lambda}$ (b) $\frac{h}{me}$ (c) $\frac{h}{m_o c}$ (d) $\frac{hc}{E}$

(2) The photoelectric effect is the ejection of electrons from the surface of a metal when

(a) it is heated to a high temperature
(b) electrons of suitable velocity strike it
(c) radiation of suitable wavelength falls on it
(d) it is placed in a strong electric field

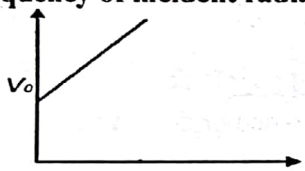

(3) Photoelectric effect can be explained only by assuming that electromagnetic radiation

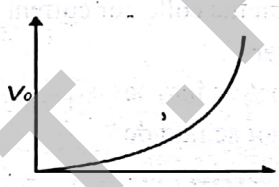

(a) is a transverse wave (b) can be polarized
(c) is a longitudinal (d) consists of quanta

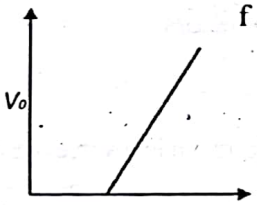

(4) Einstein's photoelectric equation is $E_k = hf - \Phi$ in this equation E_k refers to

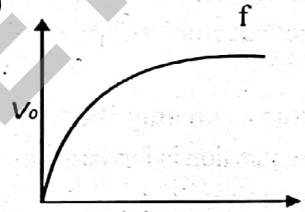

(a) kinetic energy of all the emitted electrons
(b) mean kinetic energy of emitted electrons
(c) maximum kinetic energy of emitted electrons
(d) minimum kinetic energy of emitted electrons

(5) In photoelectric effect, the graph showing the variation of cut – off voltage (V_0) with the frequency of incident radiation (f) is

(a) 

(b) 

(c) 

(d) 

(6) Light of frequency 1.5 times the threshold frequency is incident on a photo sensitive material. If the frequency is halved and intensity is doubled the photo electric current becomes

(a) four times (b) half (c) double (d) zero

(7) Matter waves are

(a) electromagnetic waves
(b) transverse waves
(c) longitudinal mechanical waves
(d) neither electromagnetic nor mechanical waves

(8) A pn junction is said to be reverse biased when

(a) no potential difference is applied across it
(b) a potential difference is applied across it making p – region positive and N – region negative
(c) a potential difference is across it making p – region negative and N – region positive
(d) a magnetic field is applied in the region of the junction

(9) When two semiconductors of p and n type are brought in contact, they form a pn junction which acts like a/an:

(a) oscillator (b) amplifier (c) rectifier (d) conductor

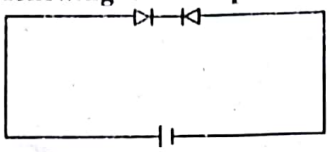

(10) NPN transistors are preferred to PNP transistors because they have

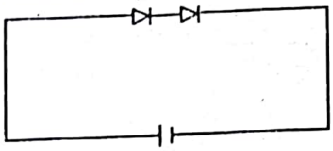

(a) low lost
(b) low dissipation
(c) capable o handling large power
(d) electrons have high mobility than holes and hence high mobility of energy

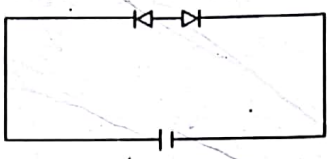

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(11) In which of the following cases the potential drop across the p-n junctions are equal

(a) 

(b) 

(c) 

(d) None of these

(12) In a transistor

(a) length of emitter is greater than that of collector
(b) length of collector is greater than that of emitter
(c) both collector and emitter have the same length
(d) none of these

(13) In a transistor the emitter current is

(a) slightly more than the collector current (b) equal to the collector current
(c) slightly less than the collector current (d) equal to the base current

(14) A diode can convert

(a) ac into dc but not dc into ac (b) ac into dc and dc into ac
(c) dc into ac but not ac into dc (d) neither ac into dc nor dc into ac

(15) Holes are charge carriers in

(a) intrinsic semiconductor (b) p – type semiconductors
(c) ionic solids (d) metals

(16) To use a transistor as an amplifier

(a) the emitter base junction is forward biased and the collector base junction is reverse biased
(b) no bias voltage is required
(c) both junctions are forward biased
(d) both junctions are reverse biased

(17) In a p – type semiconductor,

(a) holes are the only carriers
(b) electrons are the only carriers
(c) holes are the majority carriers and electrons are the minority carriers
(d) electrons are the majority carriers and hole are the minority carriers

(18) Sodium and potassium coated surface emits electrons for _____ light.

(a) infrared (b) visible (c) ultraviolet (d) yellow

(19) The energy of photon is given by

(a) $m_o c^2$ (b) $\frac{1}{2}mv^2$ (c) mgh (d) hf

(20) The length of meter rod moving with velocity equal to 3×10^8 ms^{-1} appears to an observer at rest as

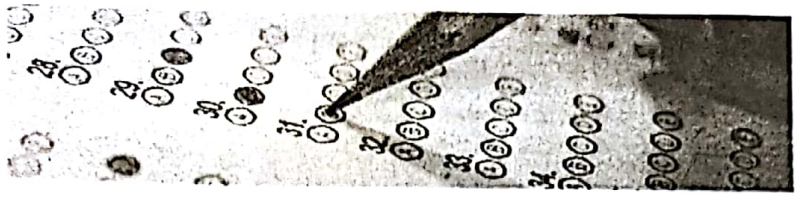

(a) 1 m (b) $\frac{1}{2}$ m (c) $\frac{1}{4}$ m (d) zero

(21) In certain circuit a collector current of 10 mA and a base current of 40μA. What is the current gain of the transistor

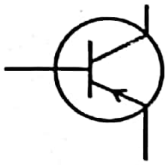

(a) 500 (b) 250 (c) 125 (d) 75

PAKGET.PK

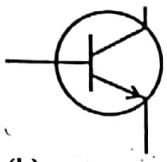

For more Entry Test books and MCQS visit PAKGET.PK

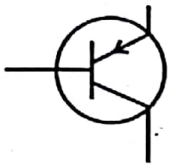

(22) **Which one is the symbol for NPN transistors**

(a)

(b)

(c)

(d) None of these

(23) **To decrease uncertainty in the measurement of position and momentum of a particle**

	Position	Momentum
(a)	decrease λ	increase λ
(b)	increase λ	decrease λ
(c)	decrease λ	decrease λ
(d)	increase λ	increase λ

(24) **Which gate has only one input terminal**

(a) OR (b) AND (c) NOT (d) NAND

(25) **The SI unit of Stefen's constant is**

(a) $Wm^{-2}K^{2}$ (b) $Wm^{-2}K^{-4}$ (c) $Wm^{-4}K^{4}$ (d) $Wm^{-4}K^{-4}$

(26) **In comparator when V - < V + then**

(a) $V_o = +Vcc$ (b) $V_o = -Vcc$ (c) $V_o = V-$ (d) $V_o = V_+$

(27) **Uncertainty principle proves the non existence of electron in**

(a) atom (b) molecule (c) matter (d) nucleus

(28) **The truth table of a logic gate is**

A	B	X
1	1	0
1	0	1
0	1	1
0	0	1

The logic gate is

(a) NAND (b) AND (c) XOR (d) NOT

(29) **NAND and NOR gate are called universal gates primarily because they**

(a) are available universally
(b) can be combined to produce OR, AND and NOT gate
(c) are widely used in integrated circuit packages
(d) are easiest to manufacture

(30) **With increase in temperature the potential barrier**

(a) increases (b) decreases (c) remains same
(d) may increase or decrease depending upon material

(31) **The number of diodes used in bridge rectifier is**

(a) one (b) two (c) three (d) four

(32) **Photo diode is operated with**

(b) forward biased (b) reverse biased (c) no biasing (d) none of these

(33) **The colour of LED depends upon**

(a) its forward biased (b) its reverse biased
(c) type of semi conductor material used (d) type of doping

(34) **The inputs of a gate are 1 and 0. If its out pout is 1 then the gate is**

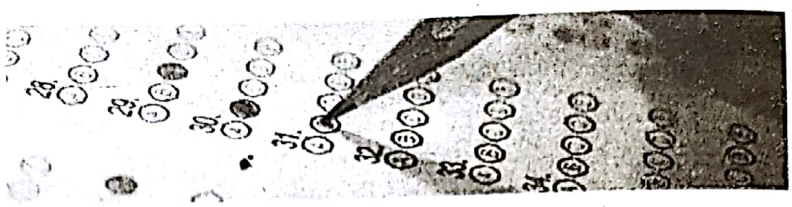

(a) OR (b) NAND (c) XOR (d) All

(35) **The base of transistor is of the order of**

(a) 10^{-2} m (b) 10^{-4} (c) 10^{-5} m (d) 10^{-6} m

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(36) **For normal operation of transistor**

	E.B Junction	B.C Junction
(a)	Forward	Forward
(b)	Forward	Reversed
(c)	Reversed	Forward
(d)	Reverse	Reversed .

(37) **For an operational amplifier the output resistance is the resistance between**
(a) inverting input and ground terminal (b) non inverting input and ground
(c) output terminal and ground (d) Input and out put terminal

(38) **The number of photons produced in annihilation of matter are**
(a) one (b) two (c) three (d) four

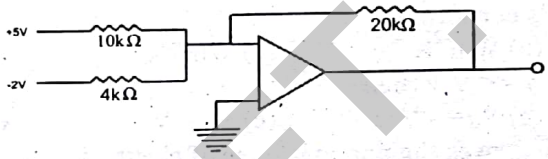

(39) **Operational amplifier can be used as**
(a) inverting amplifier (b) non-inverting amplifier
(c) comparator (d) All of these

(40) **The most commonly used semi-conductor is**
(a) germanium (b) silicon (c) gallium (d) aluminium

(41) **The region in p-n junction where charge carriers are not present is called**
(a) diffused region (b) depletion region (c) p-region (d) n-region

(42) **By which process the depletion region is formed around the junction**
(a) diffusion (b) fusion (c) emission (d) fission

(43)

What is the output of this op. amp
(a) 0 (b) 1 (c) 2 (d) 3

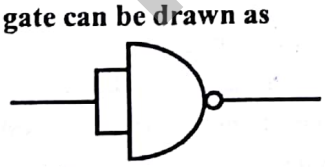

(44) **In the process of rectification the current received across the load resistance is**
(a) A.C (b) D.C (c) both a & b (d) none of these

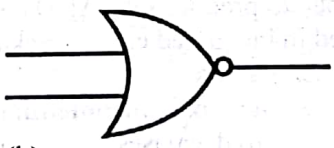

(45) **When the platinum heated at 1300^0 then its turns**
(a) cherry colour (b) yellow colour (c) red colour (d) dull red colour

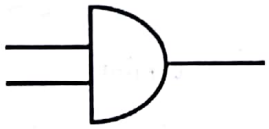

(46) **At high temperature, the proportion of shorter wavelength**
(a) decreases (b) remain same (c) increases (d) none of these

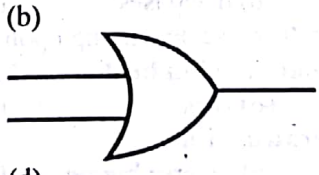

(47) **The value of Stefen's constant is**
(a) $5.67 \times 10^{-8} Wm^{-2} K^{-4}$ (b) $5.67 \times 10^{-6} Wm^{-2} K^{-4}$
(c) $2.9 \times 10^{-3} mK$ (d) $6.63 \times 10^{-24} Js$

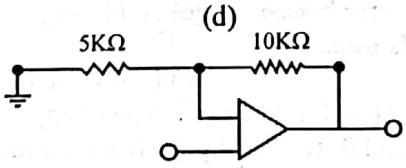

(48) **Not gate can be drawn as**

(a)

(b)

(c)

(d)

Q.49 What will be the gain of the op. amp
(a) 1 (b) 2 (c) 3 (d) 4

Q.50 $(K.E.)_{max} = hf - hf_o$ is known as:
(a) Compton equation (b) Newton's equation
(c) planks equation (d) photoelectric equation

For more Entry Test books and MCQS visit PAKGET.PK

ECAT PHYSICS CHAPTER-20+21

(1) The energy equivalent of one atomic mass unit is

(a) 1.6×10^{-19} J (b) 931 MeV (c) 6.02×10^{23} J (d) 9.31 × MeV

(2) Which of the three basic forces gravitational, electrostatic and nuclear is / are able to provide an attraction between two neutrons?

(a) electrostatic and nuclear (b) electrostatic and gravitational

(c) gravitational and nuclear (d) only nuclear

(3) For atomic nucleus, the binding energy per nucleon _____with increase in mass number .

(a) increases continuously

(b) decrease continuously

(c) remains constant

(d) first increases and than decreases with increase in mass number

(4) If the distance between anode and cathode is doubled and target potential is reduced to half. Then energy of continuous x-rays becomes

(a) double (b) half (c) remain same (d) four times

(5) Alpha rays emitted from a radioactive substance are

(a) negatively charged particles (b) helium nuclei

(c) hydrogen nuclei (d) Deutrons

(6) Beta rays can be consider as

(a) electrons (b) thermions (c) photo electrons (d) all of these

(7) A radioactive element $^{A}_{Z}X$, on emitting an α - particle , changes into

(a) $^{A}_{Z-2}Y$ (b) $^{A-4}_{Z}Y$ (c) $^{A-4}_{Z-2}Y$ (d) $^{A}_{Z+2}Y$

(8) Which of the following isotopes is normally fissionable?

(a) $^{238}_{92}U$ (b) $^{235}_{92}U$ (c) $^{239}_{93}U$ (d) $^{4}_{2}He$

(9) Heavy water is used as a moderator in a nuclear reactor. The function of the moderator is

(a) to control the energy released in the reactor

(b) to absorb neutrons and stop the chain reaction

(c) to cool the reactor

(d) to slow down the neutron to thermal energies

(10) In He-Ne laser, lasing gas is

(a) He (b) Ne (c) both He and Ne (d) hydrogen

(11) The ratio of life time of metastable excited state to the normal state is

(a) $1:10^5$ (b) $1:10^4$ (c) $10^5:1$ (d) $1:10^6$

(12) The example of nuclear fusion is

(a) formation of barium and krypton from uranium

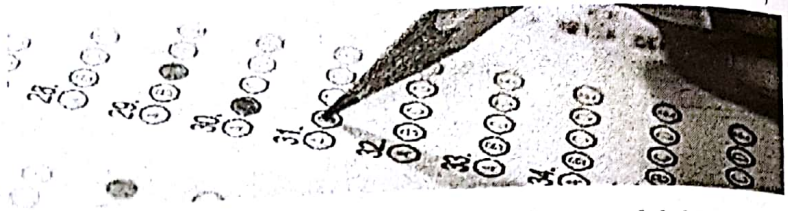

(b) formation of helium from hydrogen

(c) formation of plutonium –235 from uranium –235

(d) formation of water from hydrogen and oxygen

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(13) **Nuclear fission experiments show that the neutrons split the uranium nuclei into two fragment of about the same size. This process is accompanied by the emission of several**

(a) protons and positrons (b) neutrons

(c) α - particles (d) protons and α - particles

(14) **Curie is a unit of**

(a) energy of gamma rays (b) intensity of gamma rays

(c) half – life (d) radioactivity

(15) **Enriched uranium is better as a fuel for a nuclear reactor because it has greater proportion of**

(a) ^{233}U (b) ^{238}U (c) ^{235}U (d) ^{239}U

(16) **The main source of solar energy is**

(a) nuclear fission (b) gravitational contraction

(c) nuclear fusion (d) combustion

(17) **Fast neutrons can easily be slowed down by**

(a) the use of lead shielding (b) elastic collision with heavy nuclei

(c) passing them through water (d) applying a strong electric field

(18) **To find longest wavelength radiation in Balmer series, the value of n used is**

(a) 2 (b) 3 (c) 4 (d) ∞

(19) **To find shortest wavelength λ in Paschen series the value of n used is**

(a) 2 (b) 4 (c) 5 (d) ∞

(20) **Target material used in X-ray tube must have following properties**

(a) high atomic numbers and high melting point

(b) high atomic numbers and low melting point

(c) low atomic number and low melting point

(d) high atomic number only

(21) **To ionize hydrogen atom from its ground state energy required is**

(a) 13.6 ev (b) -13.6 ev (c) +3.4 (d) -3.4ev

(22) **Under lying principle of laser operation is**

(a) induced absorption (b) spontaneous emission

(c) stimulated emission (d) all

(23) **In order to separate isotopes of an element which method is used**

(a) chemical (b) physical (c) both a and b (d) electromagnetic

(24) **Circulation of blood can be studied by**

(a) sodium -24 (b) carbon 14 (c) strontium 90 (d) Iodine 131

(25) **In CAT, the beam of x-rays used is of**

(a) spherical shaped (b) pencil shaped (c) fan shaped (d) circular shaped

(26) **1 rem =**

(a) 1 Sv (b) 0.1 Sv (c) 0.001 Sv (d) 0.01 Sv

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(27) unit of decay constant λ is

(a) m s (b) m^{-1} (c) m (d) s^{-1}

(28) Ionization power of α is_____ than β

(a) 100 times less (b) 100 times more (c) 7000 times more (d) 7000 times less

(29) Which of the following detector is suitable for fast counting

(a) solid state detector (b) G-M counter

(c) Wilson cloud chamber (d) all are correct

(30) In solid state detector p-n junction is operated under

(a) forward bias

(b) reverse bias

(c) no bias at all

(d) reverse bias for small energy particle and no bias for large

(31) In which of the following detectors, the size of the pulse is independent of the energy of the particle

(a) G.M counter (b) solid state detector

(c) Wilson cloud chamber (d) none

(32) If $\frac{15}{16}$ of radioactive atoms decays in 16 hours. The half life of element is

(a) 16 hours (b) 8 hours (c) 4 hours (d) 2 hours

(33) The hydrogen atoms are excited to the stationary state designated by the principal quantum number n = 4. The number of maximum spectral lines are observe

(a) 2 (b) 4 (c) 3 (d) 6

(34) Hydrogen atom does not emit X – rays because

(a) its energy levels are too close to each other

(b) its energy levels are too far apart

(c) it has a very small mass

(d) it has a single electron

(35) The ratio of the energies of the hydrogen atom in the first and the second excited states is

(a) 1/4 (b) 4/9 (c) 4 (d) 9/4

(36) In which region of the electromagnetic spectrum does the Lyman series of hydrogen atom lie?

(a) infrared (b) ultraviolet (c) Visible (d) X – ray

(37) According to Bohr's theory, a line in the Balmer series arises when the electron jumps from any of the higher orbits to the orbit with quantum number

(a) 1 (b) 3 (c) 2 (d) 4

(38) The ratio of the longest and shortest wavelengths of the Lyman series is approximately

(a) 4/3 (b) 9/5 (c) 9/4 (d) 16/7

PAKGET.PK

For more Entry Test books and MCQS visit PAKGET.PK

(39) With increasing quantum number the energy difference between adjacent levels in atoms

(a) decreases (b) increases

(c) decreases for low Z and increase for high Z atoms (d) remains constant

(40) The shortest wavelength of continuous X – rays emitted from an X – rays tube depends on the

(a) current in the tube (b) nature of the gas in the tube

(c) voltage applied to the tube (d) atomic number of the target material

(41) The potential difference applied to an X – rays tube is increased. As a result, in the emitted radiation

(a) the intensity increases (b) the intensity remains unchanged

(c) the minimum wavelength decreases (d) both b & c

(42) If V is the accelerating voltage, then maximum frequency of X – rays emitted from an X – ray tube is given by

(a) $\frac{eh}{V}$ (b) $\frac{eV}{h}$ (c) $\frac{hV}{e}$ (d) $\frac{h}{eV}$

(43) In order to study the internal structure of crystals, we use

(a) X – rays (b) infrared rays (c) ultraviolet rays (d) visible light

(44) Which of the following is true?

(a) the Lyman series is a continuous spectrum

(b) the Paschen series is a line spectrum in the infrared region

(c) the Balmer series is a line spectrum in the ultraviolet region

(d) the spectral series formula can be derived from Rutherford's model of the hydrogen atom

(45) According to Bohr's 2nd postulate, angular momentum of an electron in one of its allowed orbit is given by:

(a) $mr=\frac{nh}{2\pi}$ (b) $mv=\frac{nh}{2\pi}$ (c) $mvr=\frac{h}{2\pi}$ (d) $mvr=\frac{nh}{2\pi}$

(46) According to 3rd postulate of Bohr's theory:

(a) $E_n-E_p=f\lambda$ (b) $E_n-E_p=he$ (c) $E_n-E_p=hf$ (d) $E_p-E_n=hf$

(47) X-rays are electromagnetic waves having wavelength:

(a) 10^{-6}m (b) 10^{-8}m (c) 10^{-10}m (d) 10^{-12}m

(48) The disintegration of nucleus obeys law of

(a) conservation of charge (b) conservation of mass

(c) conservation of momentum (d) all of these

(49) Binding energy of Helium is

(a) 931.5MeV (b) 93.15MeV (c) 2.13MeV (d) 28.2 MeV

(50) The most stable element is

(a) copper (b) uranium (c) iron (d) cobalt
